INTRODUCTION

The 2009 LOUISIANA TRAFFIC RECORDS DATA REPORT indicates the following occurrence rates for 2009:

- 729 fatal crashes
- 824 fatalities
- 73.9 thousand injuries
- 109.8 thousand property-damage-only crashes

These crashes resulted in:

- A cost of $5.69 billion dollars to the citizens of Louisiana, a decline of 10.2% from 2008.
- A cost of $1,991 for every licensed driver in Louisiana, a decline of 11% from 2008.

The main contributing factors to Louisiana's 2009 traffic fatalities were alcohol and a low-percentage use of safety belts. The traffic-record data shows the relationship of each contributing factor to fatalities:

- 48% of traffic fatalities were alcohol related.
- 65% of occupants who died in a crash did not use a safety belt.

The alcohol-related fatal crashes and fatalities data are estimated using a data mining algorithm developed at LSU. These results may deviate from results reported by FARS due to differences in the availability of data and model used to estimate the missing alcohol values.

Traffic reports received prior to June 30, 2010 form the basis of this report. Due to missing information and record errors, the table values may differ from the true values. Tables affected by these concerns contain relating comments.

The report was prepared by Helmut Schneider, Ph.D., Department of Information Systems and Decision Sciences, Louisiana State University, Baton Rouge, LA 70803, Ph. (225) 578-2516. The report is also available at the Internet site: http://lhsc.lsu.edu.

COST ESTIMATES

Cost estimates are based on a study conducted by NHTSA in 2000 “The Economic Impact of Motor Vehicle Crashes” (DOT HS 809446). The following table shows cost elements considered. This table serves as the basis for the cost estimates used for Louisiana crashes. The Louisiana crash report has three (severe, moderate, complaint) instead of 5 injury categories. Therefore, the cost for injuries used for Louisiana data are the average of two of the injury categories used in the study. Furthermore, the cost elements for the injury levels severe, moderate and complaint were weighted by the frequency of occurrence in Louisiana to obtain a cost figure for injury. Finally the costs were adjusted by the CPI to obtain costs for 2009. These costs are shown in the table below.

	AVERAGE COST PER PERSON	INCLUDING LOSS OF QUALITY OF LIFE
FATAL	$ 1,217,503.45	$ 4,194,183
INJURY	$ 72,012.00	$ 108,867
PDO	$ 3,154.62	$ 3,155

Based on these costs, the average cost of the 2009 crashes for the State of Louisiana was $5.69 billion and decreases to $12.45 billion if loss of quality of life is included. Various tables in the report will use the average cost per person rather than the cost, which includes the loss of quality of life.

OVERVIEW OF FATAL AND INJURY CRASHES

In 2009 there were:

- 729 fatal crashes which decreased by 11.1% from 2008
- 824 persons killed which decreased by 9.9% from 2008
- 45,335 injury traffic crashes which decreased by 2.5% from 2008
- 73,856 injuries in traffic crashes which decreased by 2.7% from 2008
- 109,793 property-damage-only crashes which decreased by 0.8% from 2008

Of the 824 fatalities:

- 109 were killed as pedestrians which decreased by 0.9% from 2008.
- 556 were killed as drivers of vehicles which decreased by 6.6% from 2008.
- 104 were killed on motorcycles which increased by 28.4% from 2008.
- 12 were killed on bicycles which increased by 20% from 2008.
- Louisiana's 2009 mileage fatality rate was 1.84 per 100 million miles traveled, decreased by 9.75% from 2008.
- Louisiana's 2009 fatality rate was 19.19 per 100,000 population which decreased by 9.95% from 2008.
- Louisiana's 2009 fatality rate was 28.81 per 100,000 licensed drivers.

MOTORCYCLES

- Motorcycle fatalities increased by 28.4% from 2008 to 2009.
- Motorcycle injuries decreased by 7.7% from 2008 to 2009.
- There were 4.7 deaths of motorcycle drivers per 100 motorcycles in crashes for 2009 as compared to 3.4 in 2008.
- Helmet use in motorcycle crashes was 89% in 2009.

INTERSTATES

- Interstate fatal crashes increased by 2% from 2008 to 2009.
- Interstates account for 15% of the fatal crashes and 16% of the fatalities in 2009.
- Fatal crashes on elevated interstates decreased by 25% from 2008 to 2009
- Injury crashes on elevated interstates decreased by 3% from 2008 to 2009

ALCOHOL

- In 2009, 402 (49%) of traffic fatalities were estimated to be alcohol related.
- It is estimated that 9.1% of the 45,335 injury crashes involved alcohol.
- Of the 109,793 property-damage-only crashes an estimated 4.3% involved alcohol.

OCCUPANT PROTECTION

- 63% of drivers killed were not wearing a safety belt.
- 73% of passengers ages 5 and older who were killed were not wearing a safety belt.
- 30% of children ages 4 and younger who were killed were not properly seated in a child seat.
- There was 89% helmet usage associated with all 2,166 motorcycle crashes (fatal, injury, and PDO crashes).

PEDESTRIANS

- Pedestrians accounted for 13.2% of all traffic fatalities which increased by 1.2 percentage points from 2008.

Trends Summary

Section A deals with trends indicated by the 2009 crash data. Charts based on tables have corresponding table names with an additional designation letter. Vehicle miles traveled, population, registered vehicles, and licensed drivers represent the methods for normalization of the actual number of crashes, injuries and fatalities. All normalization methods present shortcomings. At this time, the number of licensed drivers provides the most reliable normalization of crash data in Louisiana.

CHANGES FROM 2008 TO 2009

- In 2009 there were 824 persons killed which decreased by 9.9% from 2008.
- In 2009 there were 729 fatal crashes which decreased by 11.1% from 2008.
- In 2009 there were 1,096 vehicles involved in fatal crashes which decreased by 9.8% from 2008.
- In 2009, Louisiana had 556 drivers killed in fatal crashes which decreased by 6.6% from 2008.
- In 2009 there were 73,856 persons injured which decreased by 2.7% from 2008
- In 2009 there were 45,335 injury crashes which decreased by 2.5% from 2008

Louisiana's 2009 fatality rates were:

- 1.84 deaths per 100 million miles traveled which decreased by 9.75% from 2008.
- 19.19 deaths per 100,000 population which decreased by 9.95% from 2008.
- 28.81 deaths per 100,000 licensed drivers which decreased by 10.21% from 2008.

Louisiana's 2009 injury rates were:

- 164.6 injuries per 100 million miles traveled which decreased by 2.5% from 2008.
- 1,720 per 100,000 population which decreased by 3% from 2008.
- 2,583 injuries per 100,000 licensed drivers which decreased by 3% from 2008.

PEDESTRIANS

- The 109 pedestrians killed in 2009 accounted for 13.2% of all traffic fatalities.
- The number of pedestrians killed in 2009 was 109, which decreased by 1% from 2008.
- 1121 pedestrians were injured in 2009 which decreased by 5% from 2008.

BICYCLES AND MOTORCYCLES

- In 2009, 12 persons were killed on bicycles which increased by 20% from 2008.
- There were 104 motorcycle fatalities in 2009 which increased by 28.4% from 2008.
- Helmet use in motorcycle crashes was 89% in 2009 as compared to 88% in 2008.
- There were 1,645 injuries in motorcycle crashes in 2009 which decreased by 7.7% from 2008.

OCCUPANT PROTECTION

- 63% of drivers killed were reported not wearing a safety belt
- 73% of all occupants (5 years and older) killed were not wearing a safety belt.

VEHICLE TYPE

- In Louisiana, large trucks (gross vehicle weight rating greater than 10,000 pounds) were involved in 10.8% of all fatal crashes in 2009, -1.7 percentage points change from 2008.
- 41.0% of persons killed in motor vehicles in 2009 were occupants (drivers or passengers) of passenger cars, -0.5 percentage points change from 2008.
- 40.0% of occupants killed (drivers or passengers) of vehicles were in light trucks, vans, or SUVs in 2009, -1.4 percentage points change from 2008.
- 1.3% of occupants killed were in large trucks in 2009, -1.3 percentage points change from 2008.

INTERSTATES

- The interstate fatal crashes increased by 2% from 2008 to 2009.
- The interstate fatalities increased by 2% from 2008 to 2009.
- Interstates accounted for 15% of the fatal crashes in 2009.
- Interstates accounted for 16% of the fatalities in 2009.
- The number of fatalities per 100 million miles traveled was 1.1 in 2009 compared to 1.8 for Louisiana as a whole.

ALCOHOL

- In 2009, 353 fatal crashes (48%) were estimated to be alcohol related which decreased by 11.5% from 2008.
- In 2009, 4111 injury crashes (9.1%) were estimated to be alcohol related which decreased by 3.8% from 2008.
- In 2009, 4745 PDO crashes (4.3%) were estimated to be alcohol related which decreased by 0.1% from 2008.

Table A1: Traffic Information Overview

YEAR	VEHICLE MILES TRAVELED (100 MILLION MILES)	LICENSED DRIVERS (1,000)	POPULATION (1,000)	REGIS-TERED VEHICLES (1,000)	INJURY CRASHES (1,000)	ALL INJURIES (1,000)	FATAL CRASHES	FATALITIES	DRIVER FATALITIES	NUM-BER OF VEHICLES INVOLVED IN FATAL CRASHES	PROPERTY DAM-AGE ONLY CRASHES (1,000)
2003	442	2,799	4,494	3,771	48.7	82.8	826	938	623	1,296	111.4
2004	445	2,868	4,496	3,823	50.1	85.1	886	992	648	1,450	113.4
2005	450	2,869	4,507	3,869	49.5	82.9	874	965	649	1,408	108.1
2006	454	2,856	4,288	3,934	48.8	80.1	890	987	688	1,385	112.5
2007	454	2,838	4,293	3,991	48.2	78.9	900	993	662	1,363	110.7
2008	450	2,851	4,293	3,991	46.5	75.9	820	915	595	1,215	110.7
2009	449	2,860	4,293	3,991	45.3	73.9	729	824	556	1,096	109.8
DIFFERENCE											
1 YEAR	-0.2%	0.3%	0.0%	0.0%	-2.5%	-2.7%	-11.1%	-9.9%	-6.6%	-9.8%	-0.8%
5 YEAR	0.9%	-0.3%	-4.5%	4.4%	-9.6%	-13.2%	-17.7%	-16.9%	-14.2%	-24.4%	-3.2%
AVERAGE	-0.4%	0.1%	-1.9%	1.8%	-6.7%	-8.3%	-16.6%	-15.1%	-14.3%	-19.7%	-1.1%

The Average difference is based on the last 5 years prior to the reporting year.

Table A1 shows the crashes, injuries, fatalities and property damage only crashes. Table A1 also shows various population statistics used to calculate crash rates and injury and fatality rates. The sources for these statistics are: Vehicle Miles Traveled (Source LA DOTD), LA Licensed Drivers (Source LA Office of Motor Vehicles), Population in Thousands (Source: Census), Registered Vehicles in Thousands (Source: FARS, not available at the time the booklet was printed).

Note that the number of “all injuries” includes injuries in fatal and injury crashes.

While Louisiana’s population has declined by 4.5% and the number of licensed drivers has declined by .3% compared to pre Katrina, the vehicle miles traveled (VMT) has increased by .9%. Note that the vehicle miles traveled on Louisiana’s roads and highways is an estimate of the miles traveled by all motor vehicles traveling on Louisiana’s roads. VMT is obtained by combining two estimates of (1) VMT of interstates, US highways and state roads and (2) VMT of local roads. The table also shows the number of crashes (accidents) on Louisiana’s roads and highways, including fatal crashes, injury crashes and property damage only crashes as well as the count of fatalities and injuries.

Trends in the Population

Figure A1a: Vehicle Miles Traveled

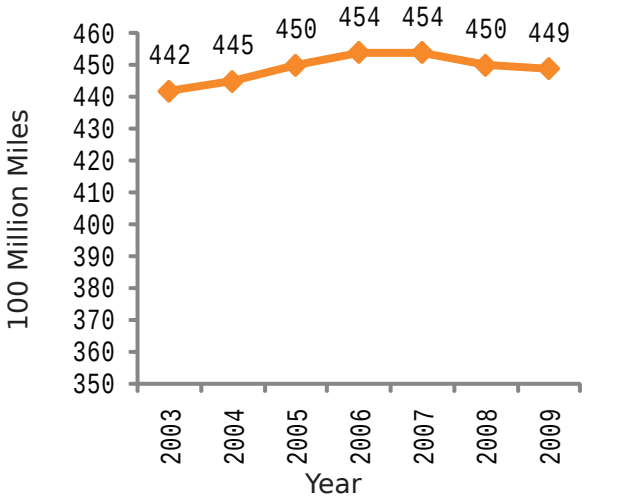

Figure A1b: LA Licensed Drivers

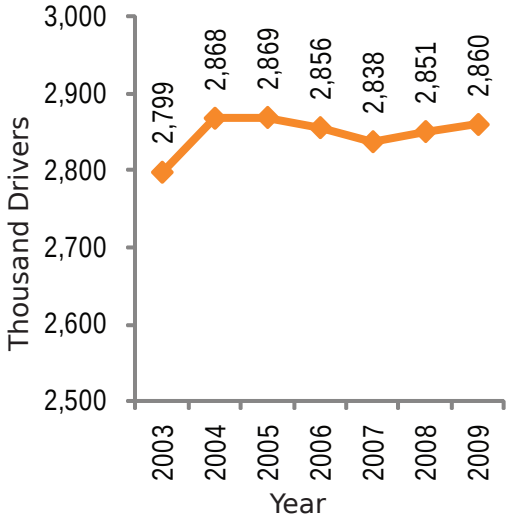

Figure A1c: Population

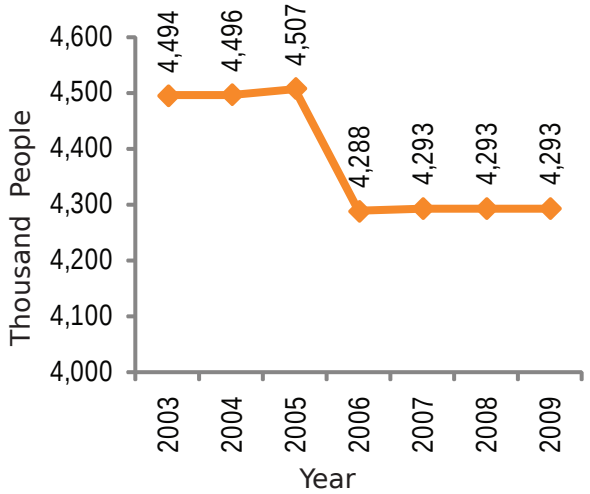
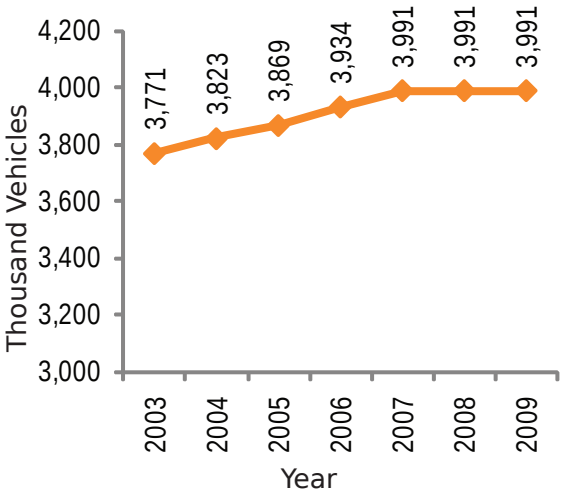


(Source: U.S. Census Bureau)

Figure A1d: Registered Vehicles



(Source: FARS)

The graphs show the trends in population statistics. Note that the number of registered vehicles is not available at this time. Note that the vehicle miles traveled (VMT) is an estimate of the miles traveled by all motor vehicles traveling on Louisiana roads. VMT is obtained by combining two estimates of (1) VMT of interstates, US highways and state roads and (2) VMT of local roads.

Counts of Crashes, Injuries and Fatalities

Figure A1e: Injury Crashes

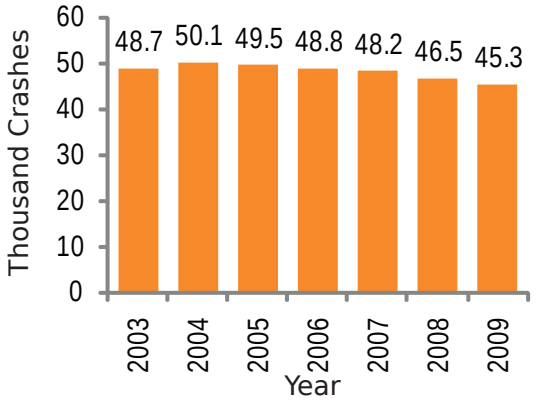


Figure A1f: Injuries

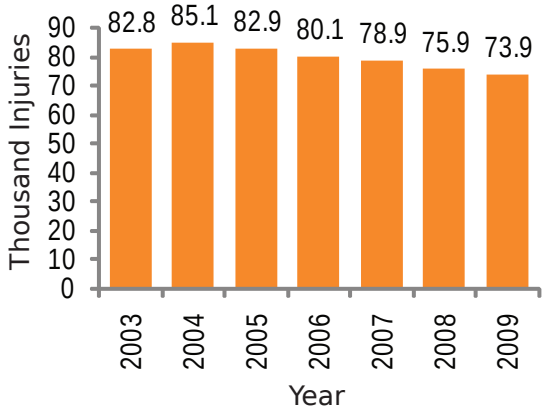

Figure A1g: Fatal Crashes

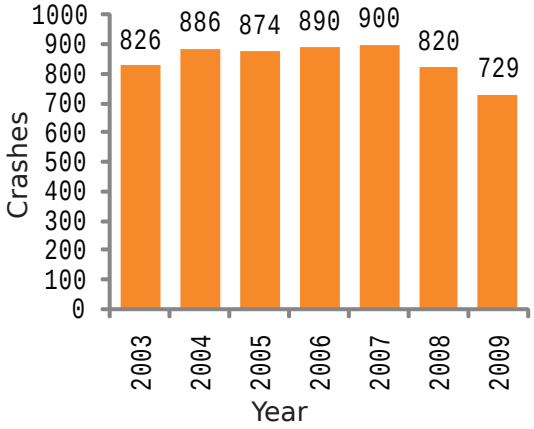

Figure A1h: Fatalities

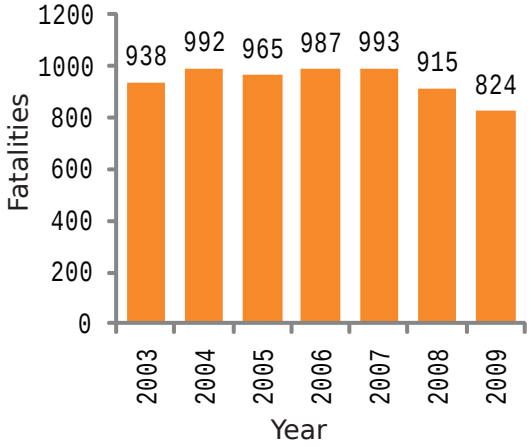

Figure A1i: All Crashes

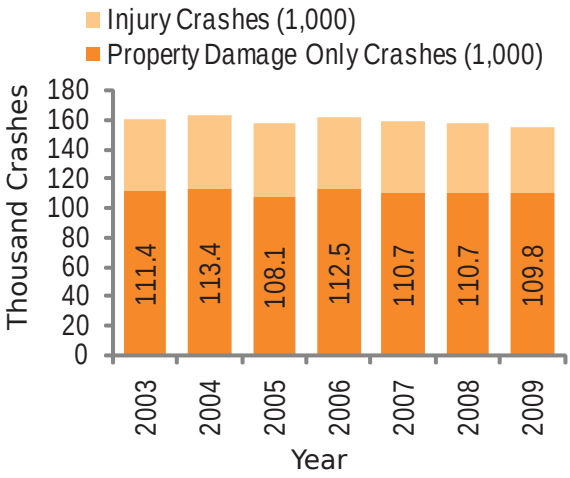

The graphs show the count of crashes, injuries and fatalities. However, the raw counts need to be interpreted with caution. Increases in the number of licensed drivers or VMT affect the number of crashes and fatalities.

Table A2: Crash Rates by VMT, Licensed Drivers and Population

RATED ARE BASED ON	100 MILLION MILES TRAV-ELED	100,000 LICENSED DRIVERS	100,000 POPULA-TION	100,000 REG. VEHICLES	100 MILLION MILES TRAV-ELED	100,000 LICENSED DRIVERS	100,000 POPULATION	100,000 REG. Table A2 shows the crash rates and injury and fatality rates. These rates are calculated by dividing the number of crashes, injuries and fatalities in Louisiana by the various population statistics. The rates allow observing trends in crashes accounted for by changes in the population statistics. The one-year difference shows the percentage change of crash, injury and fatality rates in Louisiana from the past year to the present year. The five-year difference shows the percentage change of crash, injury and fatality rates in Louisiana from 5 years past to the present year. The average shows the percentage change of crash, injury and fatality rates in Louisiana from the average of the last five years to the present year.

Injury Rates

Figure A2a: Injury & Fatal Crashes per 100 Million Miles

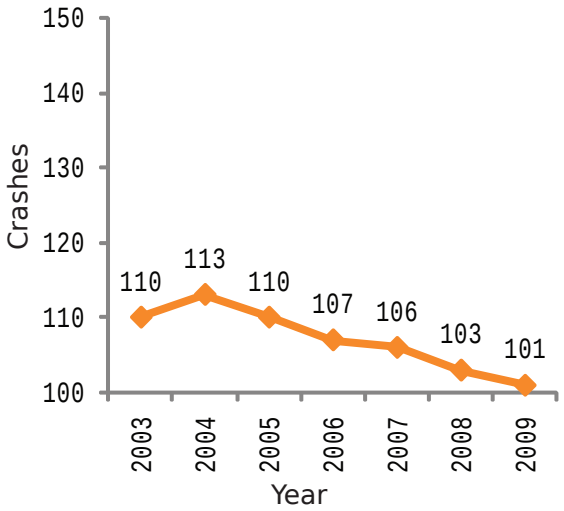

Figure A2b: Injuries per 100 Million Miles

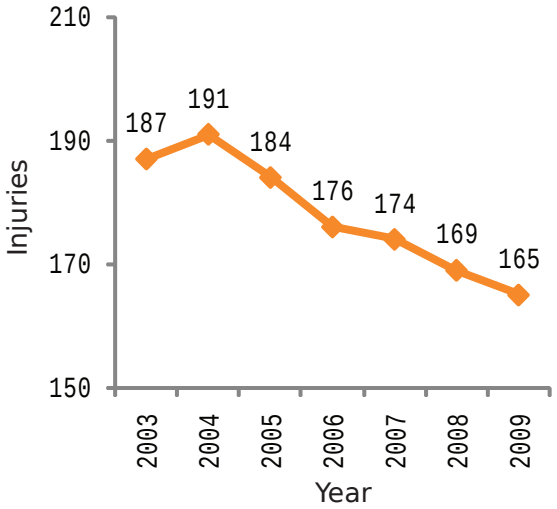

Figure A2c: Injury Crashes per 100 Thousand Licensed Drivers

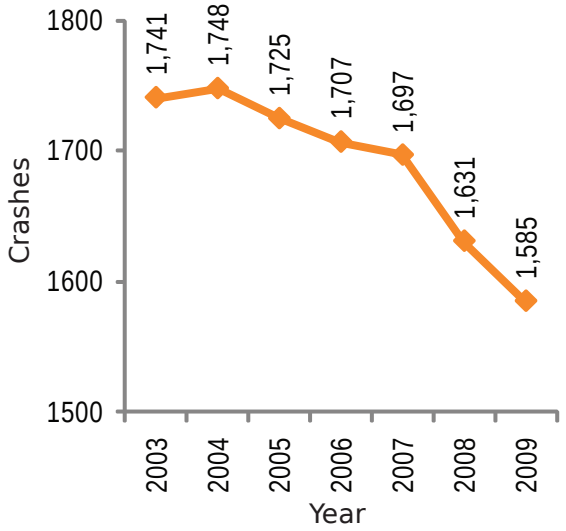

Figure A2d: Injuries per 100 Thousand Licensed Drivers

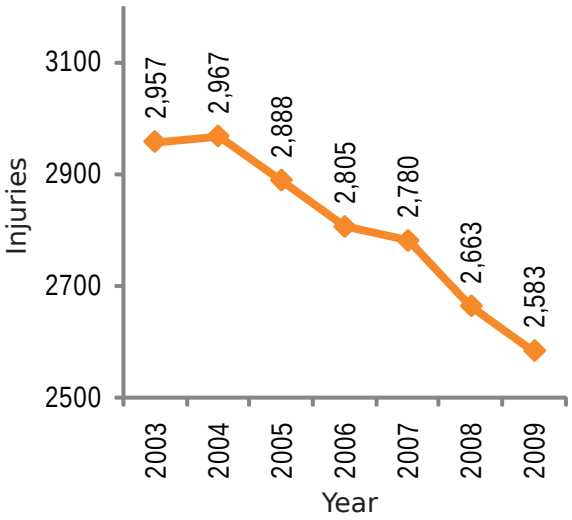

The graphs show trend charts of the injury crash rates and the injury rates.

Fatality Rates

Figure A2e: Fatal Crashes per 100 Million Miles

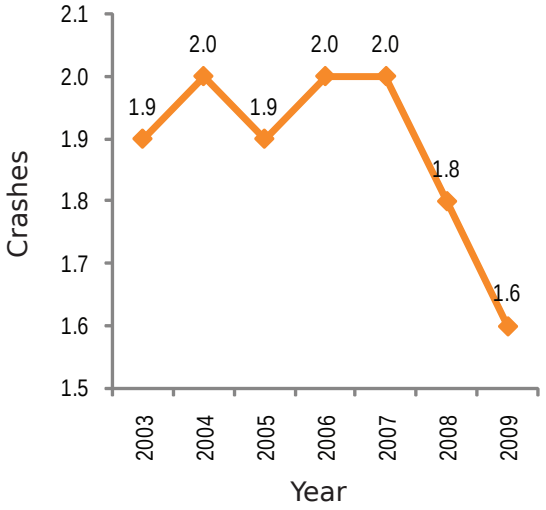

Figure A2f: Fatalities per 100 Million Miles

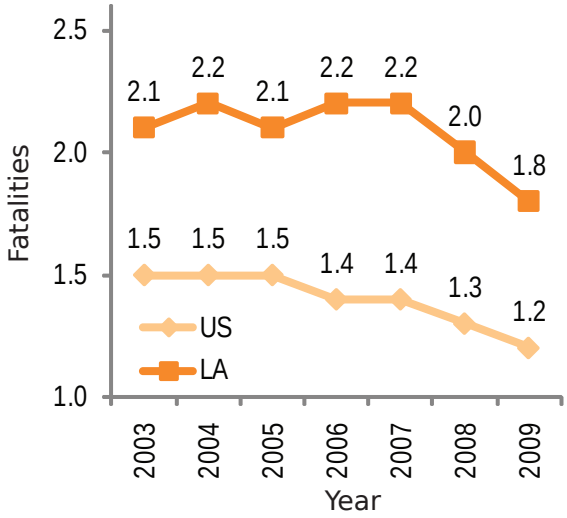

Figure A2g: Fatal Crashes per 100 Thousand Licensed Drivers

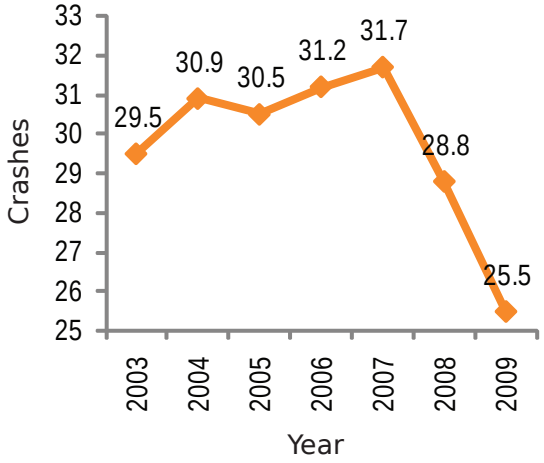

Figure A2h: Fatalities per 100 Thousand Licensed Drivers

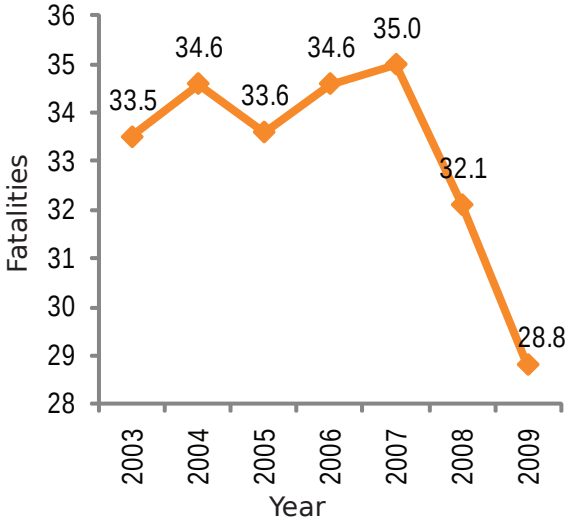

The trend charts show the fatal crash rates and fatality rates based on the licensed drivers and the VMT. Figure A2f also shows the fatality rate for the nation as a comparison. Compared to the whole nation, Louisiana has a significantly higher number of fatalities per 100 million miles traveled over the past 5 years.

Injury and Fatal Crashes per 1,000 Crashes

Figure A2i: Injury Crashes per 1,000 Crashes

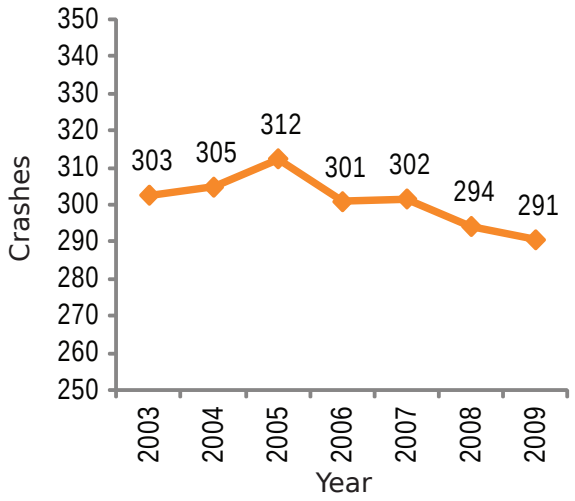

Figure A2j: Fatal Crashes per 1,000 Crashes

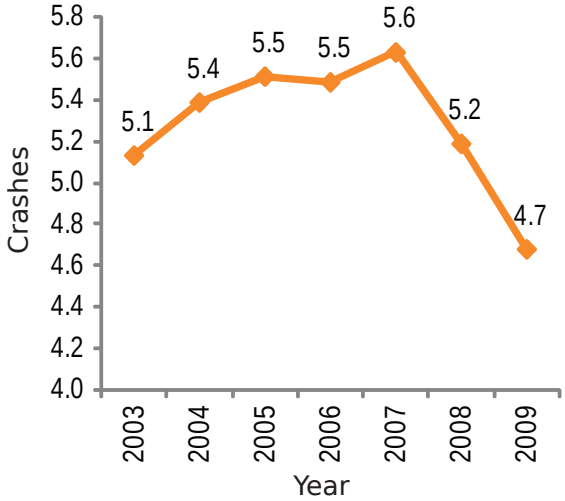

Figure A2k: Injuries per 1,000 Crashes

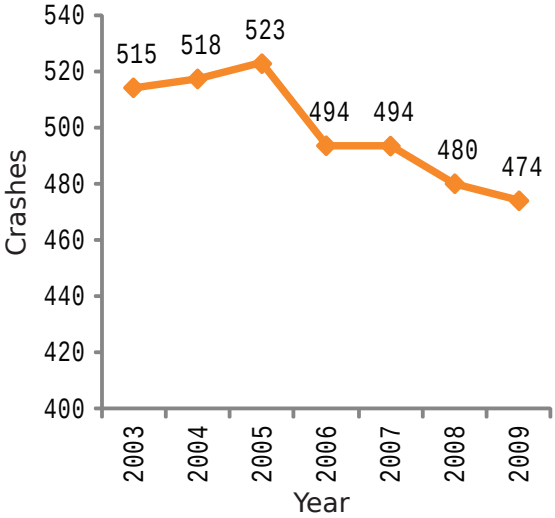

Figure A2l: Fatalities per 1,000 Crashes

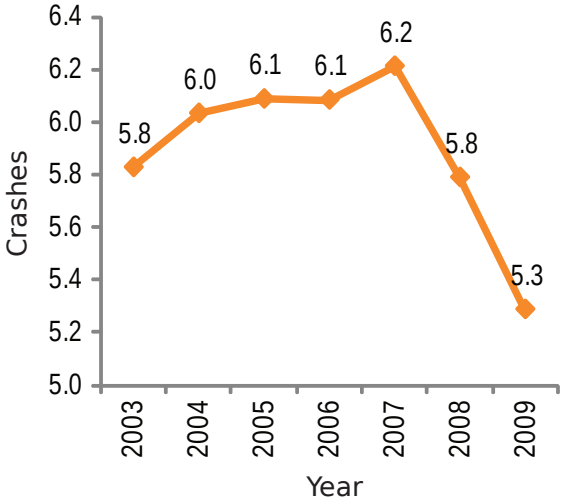

The number of injury and fatal crashes per 1,000 crashes in Louisiana and the number of injuries and fatalities per 1,000 crashes in Louisiana serve as a measure of how safety programs such as seat belt enforcement have been effective over time. As the percentage of occupants of vehicles wearing seat belts in Louisiana increases, the number of injuries per 1,000 crashes in Louisiana is expected decrease. While the number of injuries per 1,000 crashes has declined in Louisiana by 9% compared to five years ago, the number of fatalities per 1,000 crashes has also declined substantially.

Table A3: Pedestrian Injuries and Fatalities

YEAR	PEDESTRIAN		ALCOHOL INVOLVED		PENDING OR NOT TESTED

Figure A3a: Pedestrian Injuries

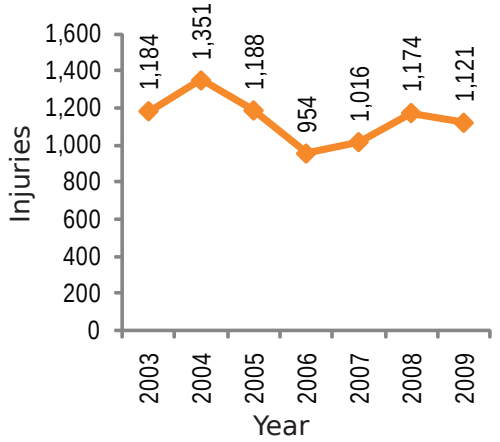

Figure A3b: Pedestrian Fatalities

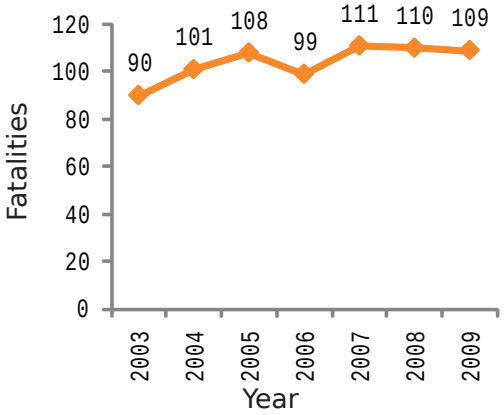

Figure A3c: Percent Pedestrian Fatalities with Alcohol Involved

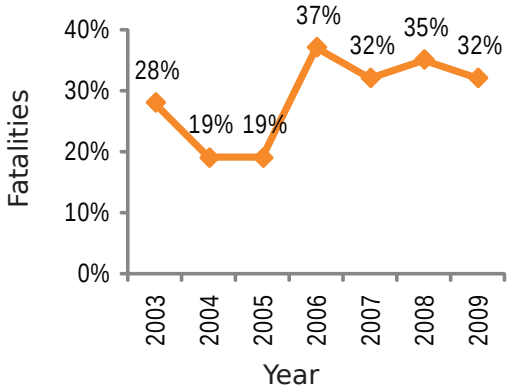

Figure A3d: Pedestrian Fatalities with Pending BAC Tests

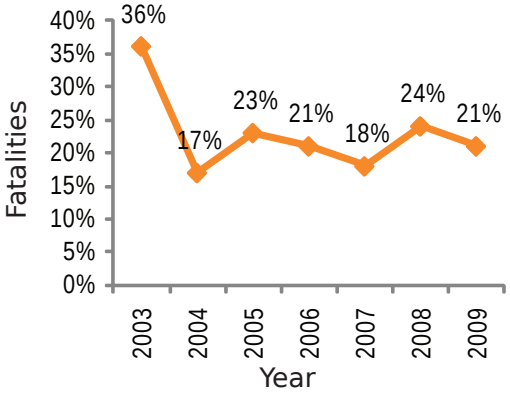

Alcohol involvement includes all cases where pedestrian fatalities had a positive BAC and cases where alcohol involvement was indicated by the investigating officer. For that reason the sum of the percentage of alcohol involved, pending, and not tested cases is larger than 100%. The number of pedestrian fatalities in Louisiana has been about 100 over the past seven years. Although the range of pedestrian fatalities in Louisiana from year to year varies, one can observe a slight upward trend in pedestrian fatalities in Louisiana over the past seven years.

Table A4: Traffic Crashes Involving Bicycles or Motorcycles

YEAR	BICYCLES

2009	12	4	33%	596	773
DIFFERENCE					
1 YEAR	20.0%	33.3%	3.3%	-6.3%	-1.4%
5 YEAR	9.1%	300.0%	24.2%	-18.5%	-17.3%
AVERAGE	-32.6%	-25.9%	5.4%	-5.5%	-4.0%

The two tables depicted left and below show the trend in bicycle and motorcycle fatalities and injuries in Louisiana. Note that the raw numbers of bicycle and motorcycle fatalities and injuries in Louisiana need to be interpreted with caution because of changes in traffic volume. Unfortunately, vehicle miles traveled, registered vehicles and licensed drivers are all poor predictors of bicycle or motorcycle crashes, injuries and fatalities in Louisiana One of the problems is that reliable estimates of vehicle miles traveled, registered vehicles and licensed drivers for motorcycles are difficult to obtain in Louisiana in particular and the US in general. Thus, to assess safety measures, such as the mandatory helmet law, the most useful measure is the percentage of motorcyclists killed in crashes.

While the number of persons injured in bicycle crashes in Louisiana has been decreasing by 18% over the past 5 years, the number of fatalities in bicycle crashes has also been showing a decrease over the past 2 years. In the past three years the percentage of bicyclists killed as percent of bicycle crashes in Louisiana has decreased from about 3% to 1.5%.

Over the past seven years the number of motorcycle fatalities in Louisiana has been steadily increasing. Much of this increase in motorcycle fatalities in Louisiana is due to the increase in motorcycle crashes on Louisiana roads and highways. However, the change to a mandatory helmet law in Louisiana in the fall of 2004 had a significant effect on the percentage of fatalities in motorcycle crashes in Louisiana as can be seen from the last column in the table below. From 2000 to fall of 2004, on the average 4.5% of drivers were killed in motorcycle crashes on Louisiana roads and highways. From fall of 2004 to December of 2007 this percentage dropped to 3.9%. This 0.6 percentage point drop in the percentage of motorcycle drivers killed in Louisiana resulted in 61 lives saved since the enactment of the mandatory helmet law by the Louisiana legislators in fall of 2004. When injuries are included the estimated cost savings over the 39 months following the enactment of the mandatory helmet law in Louisiana was above $200 million. These savings were due to the increase in helmet use of motorcycle riders on Louisiana roads and highways from about 40% prior to the mandatory helmet law to close to 90% after the mandatory helmet law. Although the number of injuries involving motorcycles dropped by almost 8% this year, the number of fatalities increased by 28%. Much of this increase can be attributed to the increase in alcohol related fatalities which increased by 48% from 2008.

Table A5 shows the alcohol-related crashes by severity on Louisiana's roads and highways. The alcohol-related fatal crashes and fatalities are estimated using a classification tree to estimate missing BAC test results. These results may deviate from results reported by Louisiana law-enforcement agencies or statistics published through FARS because of different estimation methods used.

Table A6 shows the highest BAC of drivers in fatal crashes. A BAC of zero is reported if all drivers have been tested and a zero BAC was reported for all of them. A BAC larger than zero is reported if one of the drivers had a positive BAC result regardless of whether or not all drivers were tested. Unknown BAC results include crashes were drivers either were not tested, refused testing, or where test results were pending. Because of the large number of unknown values no reliable trend in the known BAC values can be determined.

BAC Trends

Figure A6a: Trend of BACs for Alcohol-Related Fatal Crashes

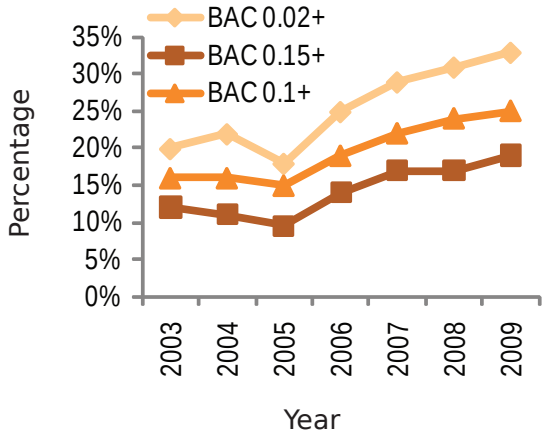

Figure A6b: Trend in BACs for Alcohol-Related Fatalities

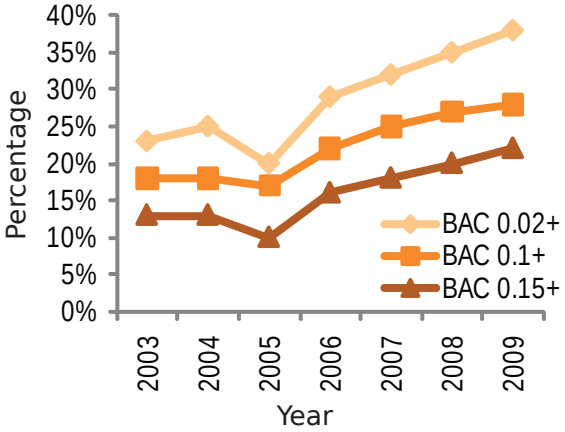

Figure A6c: Percentage of Zero BAC Results in Fatal Crashes

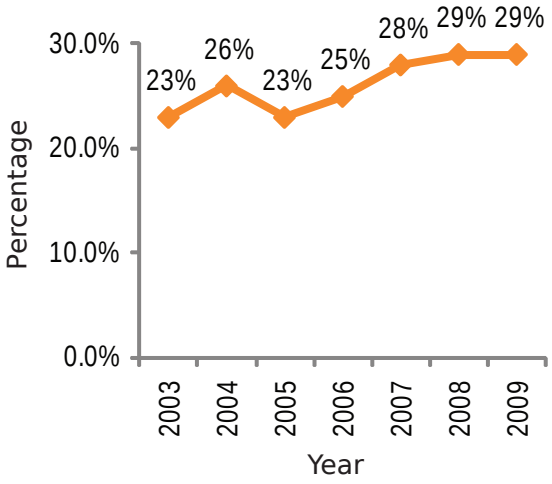

Figure A6d: Percentage of Unknown BAC in Fatal Crashes

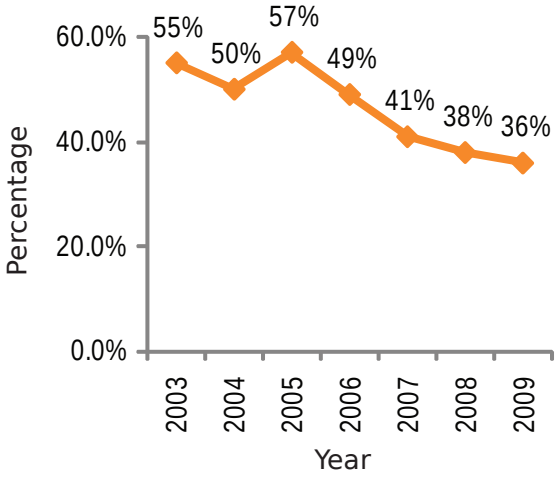

Although the percentage of zero BAC results in crashes has been increasing in the past four years, the percentage of positive BAC results has also been increasing. This is due to better reporting of BAC results. The A6d trend chart for BAC shows that the percentage of unknown BAC values has been declining over the past five years.

Figure A8a: Youth Fatal Crash Rates

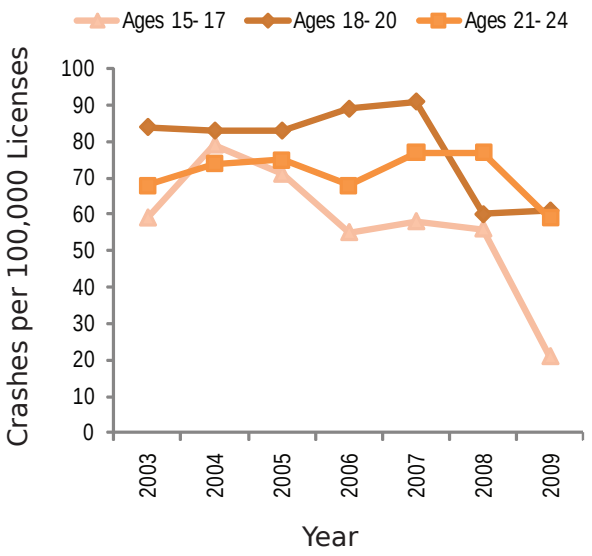

Figure A8b: Youth Alcohol Fatal Crash Rates

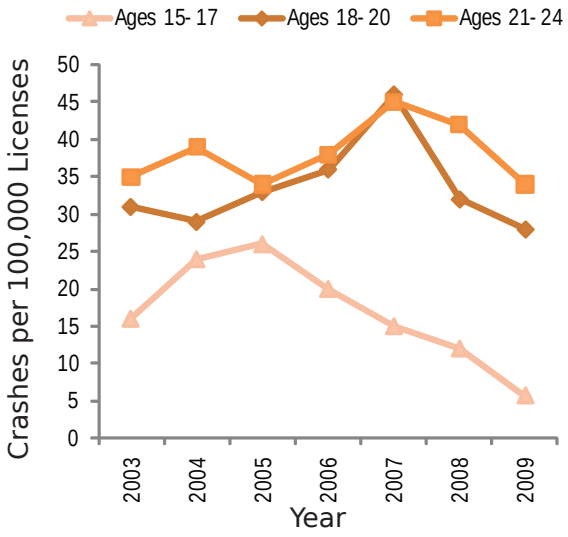

Figure A8c: Youth Injury Crash Rates

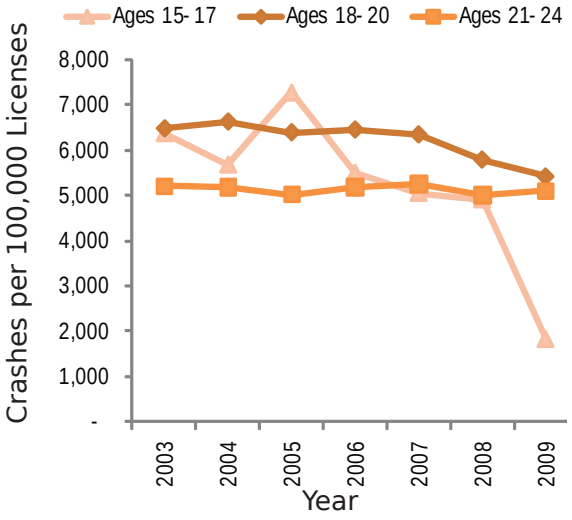

Figure A8d: Youth Alcohol Injury Crash Rates

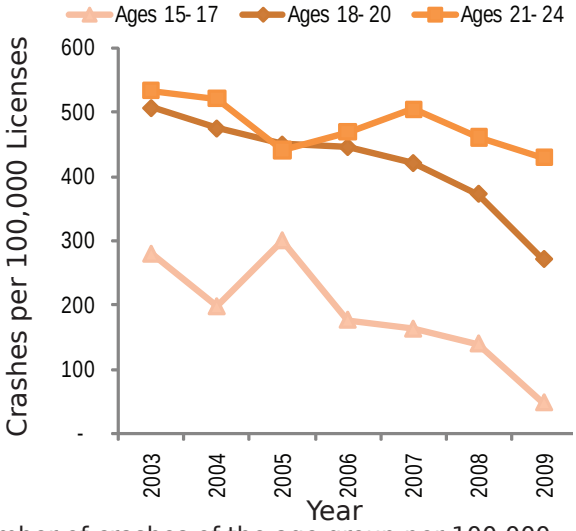

Table A8 and the trend charts show the crash rates (number of crashes of the age group per 100,000 licensed drivers) and alcohol-involved crash rates of youths between 15 and 24 years of age. The alcohol-involved crash rate (A8b) of 18-20 year old drivers has been trending downward over the past two years.

AVERAGE	3%	-2%	-28%	1%	8%	2%

Not wearing safety belts is a major contributing factor for crashes to result in fatalities. Table 9 gives the percentage of drivers, passengers, and the total number of all occupants killed not wearing seat belts. It excludes fatalities with unknown seat belt use. A major factor in children under age 5 being killed in crashes is that child safety seats are not used or improperly used. The percentage of children killed not properly in a child seat dropped 33% this year. The percentage of all occupants killed not wearing a safety belt has remained steady at 65% for the past 3 years.

There are two percentages which may be used when evaluating crashes by vehicle type, namely, the percent of type of vehicles involved in crashes (Table 13a) and the percent of fatalities by vehicle type (Table 12). For instance, in 2009, 41% of the driver and occupant fatalities occurred in a car (A12) while cars made up only 34% of the vehicles involved in fatal crashes (A13a). Table A13b shows the percentage of fatal crashes involving a large truck or bus. While only 7.2% of the vehicles involved in fatal crashes are large trucks or busses (A13a), 11% of all fatal crashes involve a large truck or bus.

Table A17 gives the statistics of the emergency medical services for rural areas while Table 18 gives the same statistics for urban areas. The average time of crash to EMS notification in rural areas is much higher than for urban areas. These data show that in rural areas it takes about twice as long for a person to be delivered to the hospital than in urban areas. The time of crash to EMS notification need to be interpreted with caution because in many cases the EMS is at the crash scene before the police arrives. Thus all times are often estimated by the investigating officer.

Fatal Crashes
Summary

Section B provides an overview of traffic fatalities in 2009. The charts show fatal crashes and traffic fatalities by Parish, by month, by day of the week, and by the time of day. This section also presents fatalities by gender and role; i.e., driver, passenger or pedestrian.

- In 2009 there were 729 fatal crashes.
- In 2009 there were 824 persons killed.
- The likelihood of fatal crashes increases on weekends (Friday to Sunday) compared to the rest of the week.
- While Friday to Sunday accounts for about 42.9% of the time in a week, Friday to Sunday accounted for 51.3% of all fatal crashes in 2009.
- Fatal crashes are not equally distributed throughout the day. More fatal crashes occur during the late evening and early morning hours.
- In 2009, about 67.5% of all traffic fatalities were drivers; about 19.3% were passengers and about 13.2% were pedestrians.
- In 2009, 74.4% of all traffic fatalities were male and 25.6% were female.

TOTAL	729	556	159	109	824

Note: Crsh - Fatal Crashes, Dr - Driver Fatalities, Pass - Passenger Fatalities, Ped - Pedestrian Fatalities

Table B1 gives a summary of all fatal crashes and fatalities by parish. The table also describes the type of the fatality, whether it was a driver, occupant, or pedestrian. The parishes are of different sizes, population, licensed drivers and vehicle miles traveled; therefore the number of crashes need to be adjusted for these parish characteristics. Section D will have a detailed analysis of parish data and Section L will have an analysis of the pedestrian fatality data by parish adjusted for population. For more detailed information about each parish, see D3.

Table B2: Fatal Crashes by Month

MONTH	FATAL CRASHES	% OF FATAL CRASHES
JANUARY	67	9%
FEBRUARY	67	9%
MARCH	66	9%
APRIL	64	9%
MAY	76	10%
JUNE	67	9%
JULY	60	8%
AUGUST	52	7%
SEPTEMBER	53	7%
OCTOBER	60	8%
NOVEMBER	50	7%
DECEMBER	47	6%
TOTAL	729	100%

The number of fatal crashes varies from month to month. However, in order to draw valid conclusions, the number of days in a month and the number of weekends has to be taken into consideration. A detailed analysis is given in Section E.

Figure B2a: Fatal Crashes by Month

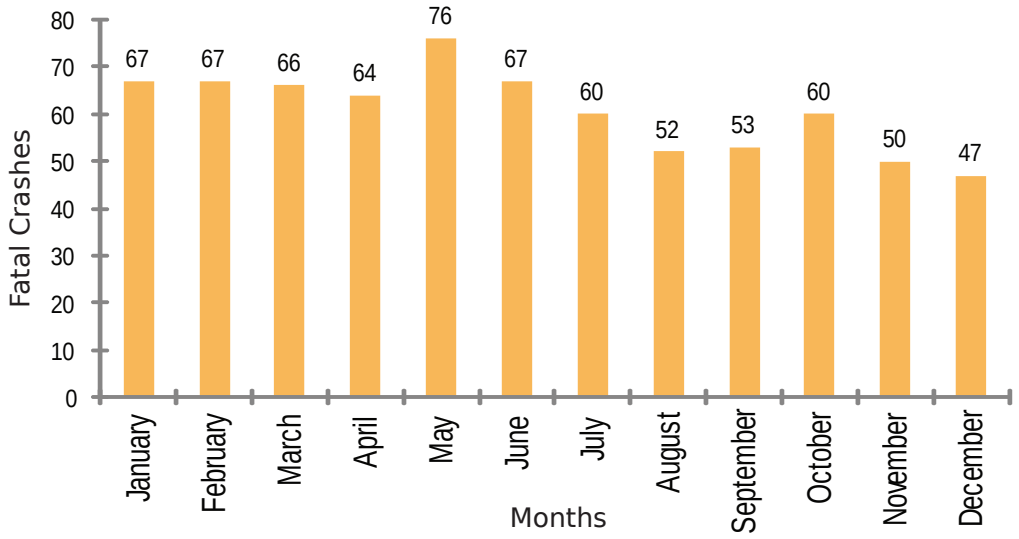

Figure B2b: Average Percent of Fatal Crashes by Month

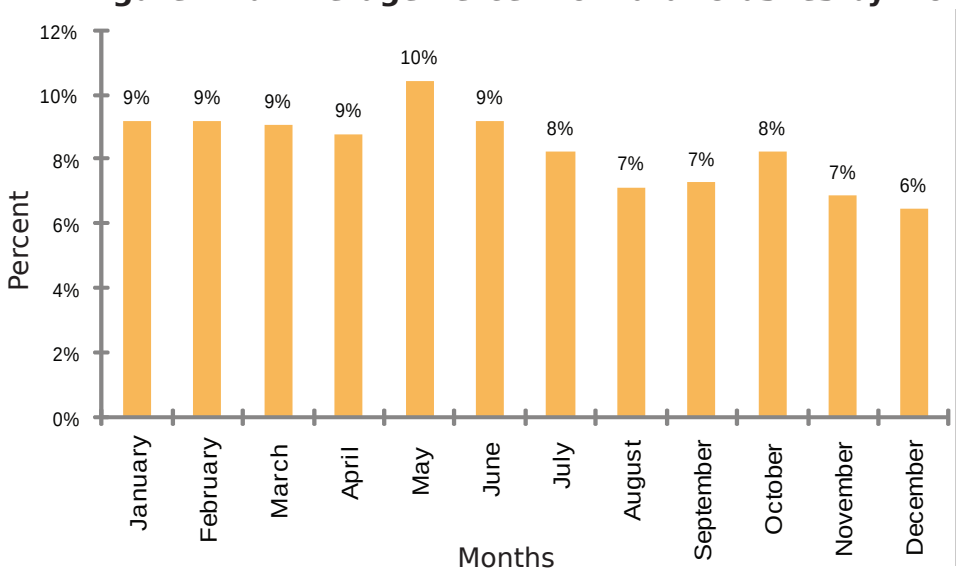

Table B3: Fatal Crashes by Day of Week

DAY	FATAL CRASHES	PERCENT CRASHES
MONDAY	87	12%
TUESDAY	82	11%
WEDNESDAY	100	14%
THURSDAY	86	12%
FRIDAY	119	16%
SATURDAY	150	21%
SUNDAY	105	14%

The number of fatal crashes on weekends is consistently higher than during the week. However, further analysis shows that the fatal crashes on the weekends occur mainly during the evening and early morning hours, i.e., Friday to Saturday and Saturday to Sunday night. The early morning hours on Sunday account for the high number of crashes on Sunday.

Injury Crashes
Summary

Section C provides an overview of traffic injuries in 2009. The charts also show crashes involving injuries and traffic injuries by Parish, by month, by day of the week, and by the time of day. In addition, Section C provides information regarding traffic injuries by gender and role; i.e., driver, passenger or pedestrian. Note that injuries in crashes also include injuries in fatal crashes.

- In 2009, of the 73,856 people injured, 48238 were drivers.
- Approximately 65.3% of the injured persons in 2009 were drivers, 33.2% were passengers, and 1.5% were pedestrians.
- Males and females made up 48.4% and 51.6% of injured drivers, respectively. The remaining percentage is drivers with unknown gender.

Note: Crsh = Injury Crashes, Dr = Driver Injuries, Pass = Passenger Injuries, Ped = Pedestrian Injuries

Table C1 gives a summary of all injury crashes and injuries by parish. The table also describes the type of the injury, whether it was a driver, occupant, or pedestrian. The parishes are of different sizes, population, licensed drivers and vehicle miles traveled; therefore the number of crashes need to be adjusted for these parish characteristics. Section D will have a detailed analysis of parish data and Section L will have an analysis of the pedestrian injury data by parish adjusted for population. For more detailed information about each parish see D3.

Table C2: Injury Crashes by Month

MONTH	INJURY CRASHES	ALL CRASHES	INJURY CRASHES AS PERCENT OF ALL CRASHES	PERCENT OF INJURY CRASHES PER MONTH
JANUARY	3,652	12,591	29%	8.1%
FEBRUARY	3,761	13,066	29%	8.3%
MARCH	4,208	14,490	29%	9.3%

AUGUST	3,599	12,099	30%	7.9%
SEPTEMBER	3,612	12,645	29%	8.0%
OCTOBER	3,903	14,272	27%	8.6%
NOVEMBER	3,539	12,272	29%	7.8%
DECEMBER	3,712	13,691	27%	8.2%
TOTAL	45,335	155,857		100.0%

Figure C2a: Injury Crashes by Month

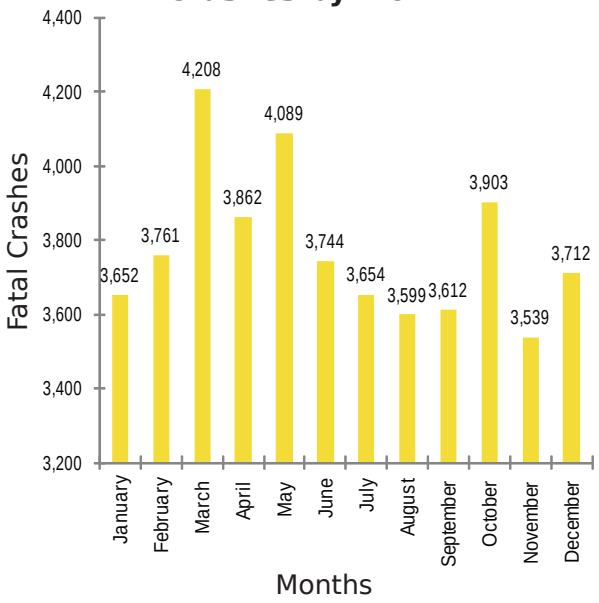

Figure C2b: Percent of Injury Crashes by Month

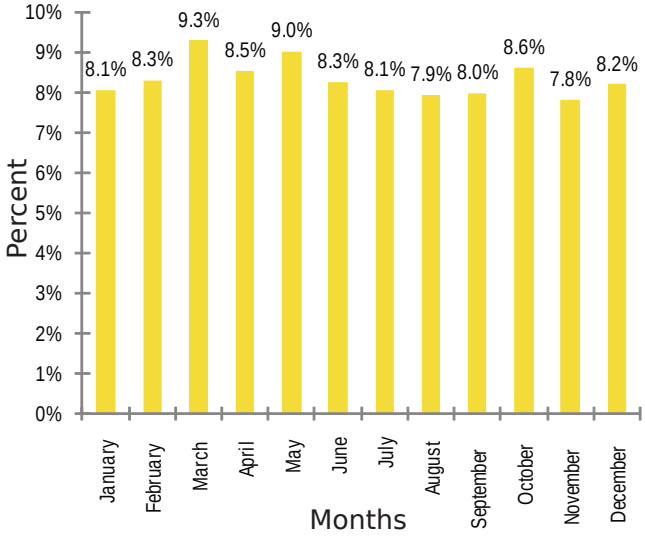

Figure C2c: Injury Crashes as Percent of All Crashes by Month

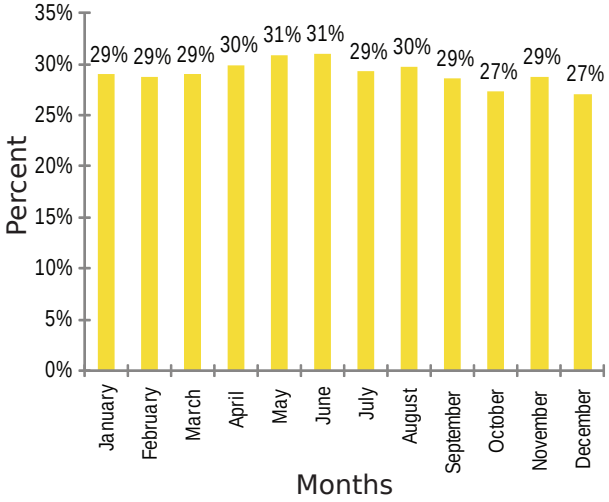

Figure C2b shows the percent of injury crashes on Louisiana roads and highways for each month of the year.

Figure C2c shows the percent of injury crashes by month as a percent of all crashes, i.e. including PDO crashes. Some months may have a low number of injury crashes, but a relative high percent when compared to all crashes in the month.

Table C3: Injury Crashes by Day of Week

DAY	INJURY CRASHES	ALL CRASHES	INJURY CRASHES AS PERCENT OF ALL CRASHES	PERCENT OF INJURY CRASHES PER DAY OF WEEK
MONDAY	6,518	22,514	29%	14.4%
TUESDAY	6,449	22,887	28%	14.2%
WEDNESDAY	6,349	22,341	28%	14.0%
THURSDAY	6,607	23,763	28%	14.6%
FRIDAY	7,747	27,326	28%	17.1%
SATURDAY	6,628	21,362	31%	14.6%
SUNDAY	5,037	15,664	32%	11.1%
TOTAL	45,335	155,857		100%

Figure C3a: Injury Crashes by Day of Week

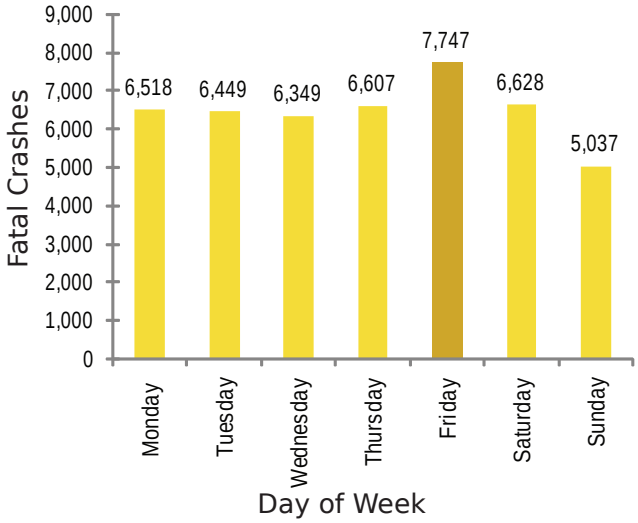

Figure C3b: Percent of Injury Crashes by Day of Week

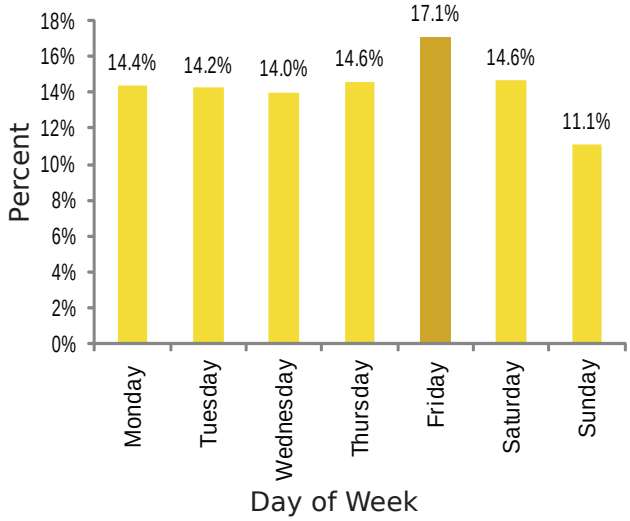

Figure C3c: Injury Crashes as Percent of All Crashes by Day of Week

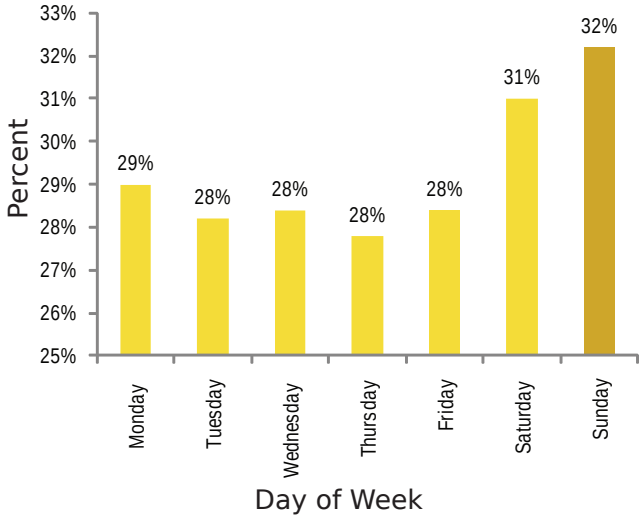

Although Fridays have most of the injury crashes, Saturdays and Sundays have the highest percent of injury crashes.

Table C4: Injury Crashes by Time of Day

TIME OF DAY	INJURY CRASHES

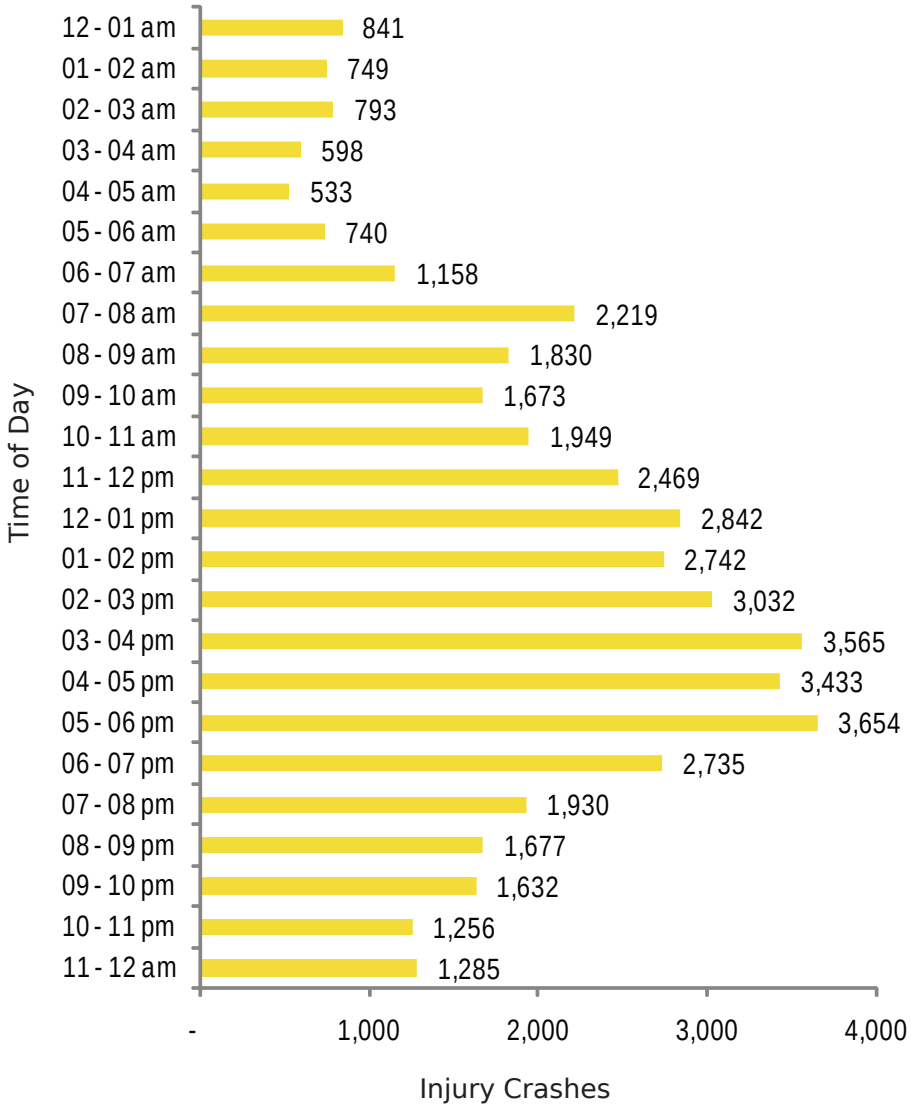
TOTAL	45,335

Figure C4a: Injury Crashes by Time of Day



This table does not include crashes with unknown time. Injury crashes are not equally distributed during the day. The injury crashes show a consistent pattern over the years; namely, injury crashes occur most frequently between 11a.m. and 7p.m.

** Crash data is from all Injury Crashes excluding all fatalities. Injury data is for all injuries regardless of whether they occur in an injury or a fatal crash. The table entries do not include crashes with missing month or parish information. The total column does not include crashes with missing parish information.*

Where Crashes Occur
Summary

Section D deals with the location where the crashes occur categorized by parish, city, rural, and urban. We present the crashes by highway type and report the number of crashes on interstates. Grouping of parish data is by the size of the parish based on the number of licensed drivers. This section provides extensive information about fatalities and injuries and indicates whether they were alcohol-related or speed-related for each city that has a city code. The rural grouping for each parish includes areas per parish not having a city code. This “rural” grouping becomes less meaningful as suburbs continue to grow without city incorporation.

Note

(1) Shreveport is in Bossier and Caddo Parishes.

(2) The sum of the cities and “Rural” does not add up to the total in many Parishes because of possible missing “City Codes”.

(3) Fatal alcohol crashes are estimated.

Table D2: Cost of Crashes by City & Parish (in Millions)

Note:
(1) Shreveport is in Bossier and Caddo Parishes.

(2) The sum of the cities and “Rural” does not add up to the total in many Parishes because of possible missing “City Codes”.

(3) Fatal alcohol crashes are estimated.

This table does not include crashes with missing parish or rural/urban information.

This table shows a comparison of this year's number of crashes to last year's number of crashes. However, increases and decreases in number of crashes may be caused by changes in reporting of crashes from local agencies.

Table D4: Parish Ranking

PRIVATE PROPERTY	0	0	0	0.0%
TOLL ROAD	46	0	46	0.0%
NOT REPORTED	306	0	306	0.0%
TOTAL	45,334	729	46,063	1.6%

Figure D6a: Injury Crashes by Highway Type

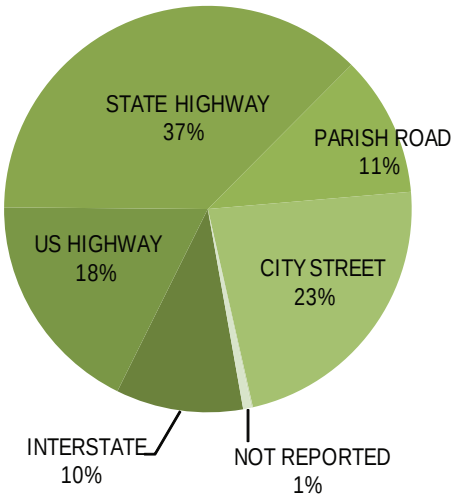

Figure D6b: Fatal Crashes by Highway Type

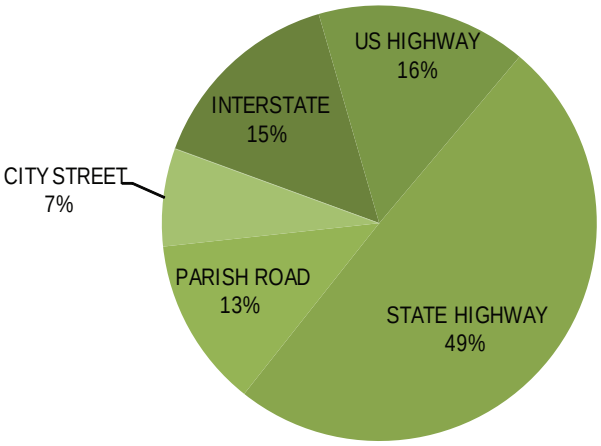

The pie charts show the percentage of injury and fatal crashes. Note that only the major road types are labeled.

Table D7: Fatal and Injury Crashes by Intersection

	INJURY CRASHES	FATAL CRASHES	TOTAL CRASHES	% FATAL CRASHES
NOT WITHIN 100 FT. OF INTERSECTION	27,439	573	28,012	2.1%
WITHIN 100 FT. OF INTERSECTION	17,896	156	18,052	0.9%
UNKNOWN	0	0	0	0.0%
TOTAL	45,335	729	46,064	

Of all injury crashes, 39% occurred within 100 ft of an intersection in 2005. However, only 21% of fatal crashes occurred within 100ft of an intersection.

Figure D7a: Injury Crashes by Intersection

When Crashes Occur
Summary

Crashes do not occur uniformly over time. This section deals with the analysis of the traffic crashes with respect to the month of the year, the day of the week, and the time of the day.

MONTH OF THE YEAR

- When interpreting the number of crashes by month, we have to keep in mind that the number of crashes depends not only on the number of days per month but also on the number of weekends in a month. An average number of fatal crashes may be estimated based on the number of days and weekends in a month.

DAY OF WEEK

- Injury crashes are lowest on weekends. Fatal crashes are highest on weekends.
- In 2009 about 51.3% of all fatal crashes occurred on the three days of weekends: Friday to Sunday.

TIME OF DAY

- Injury crashes are highest during afternoon rush hour traffic.
- Fatal crashes occur more frequently in the evening and early morning hours.
- Rush hour has the lowest fatality percentage.
- Evening and early morning hours have a higher percent of fatalities.
- Injury crashes occur primarily during rush hour on Monday to Friday.
- Fatal crashes tend to occur more frequently on the weekends in the evening and early morning hours.
- Fatal crashes are not a fixed percentage of all crashes. Thus, reducing the total number of crashes does not necessarily reduce the number of fatalities.

Table E1: Crashes by Month

MONTH	INJURY CRASHES		FATAL CRASHES	
	TOTAL	PER DAY	TOTAL	PER DAY
JANUARY	3,652	118	67	2.2
FEBRUARY	3,761	134	67	2.4
MARCH	4,208	136	66	2.1
APRIL	3,862	129	64	2.1
MAY	4,089	132	76	2.5
JUNE	3,744	125	67	2.2
JULY	3,654	118	60	1.9
AUGUST	3,599	116	52	1.7
SEPTEMBER	3,612	120	53	1.8
OCTOBER	3,903	126	60	1.9
NOVEMBER	3,539	118	50	1.7
DECEMBER	3,712	120	47	1.5

Note: The table does not include crashes with missing date information.

Figure E1a: Injury Crashes by Month

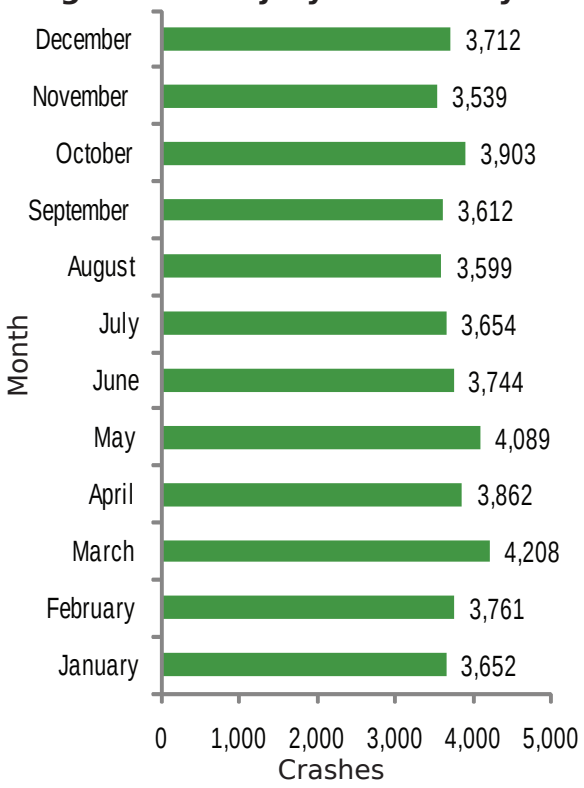

Figure E1b: Fatal Crashes by Month

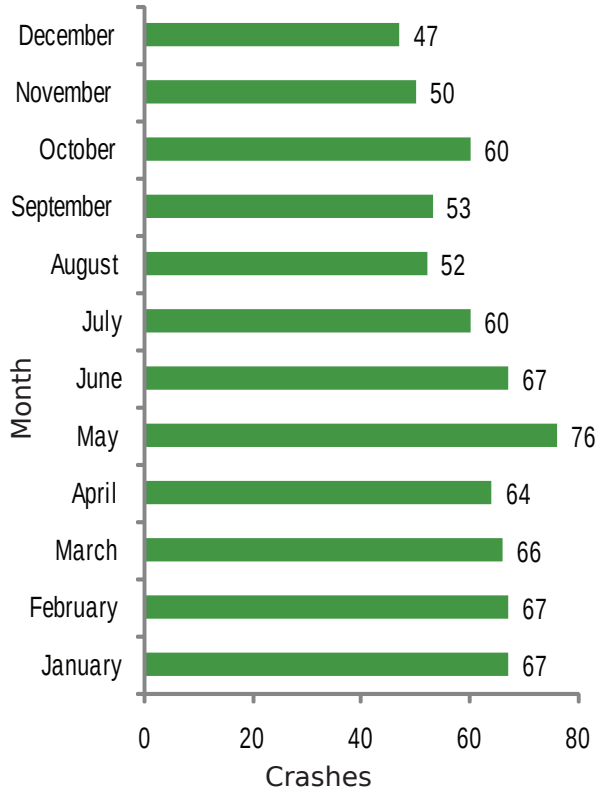

Table E2: Crashes by Day of Week

DAY OF WEEK	INJURY CRASHES		FATAL CRASHES	
	TOTAL	PERCENT	TOTAL	PERCENT
MONDAY	6,518	14%	87	12%
TUESDAY	6,449	14%	82	11%
WEDNESDAY	6,349	14%	100	14%
THURSDAY	6,607	15%	86	12%
FRIDAY	7,747	17%	119	16%
SATURDAY	6,628	15%	150	21%
SUNDAY	5,037	11%	105	14%
TOTAL	45,335	100.0%	729	100%

While injury crashes are lowest on Sundays, fatal crashes are highest on the weekends. Most of these fatal crashes on Sundays occur during the early morning hours between 12am to 3am.

Crash Types
Summary

Roadway and weather factors may affect the number and severity of crashes. This section analyzes the type of crashes with respect to weather conditions, road conditions, and the type of collision.

ROAD CONDITIONS

- 95% of the injury crashes had no reported road defects in 2009.
- 95% of the fatal crashes had no reported road defects in 2009.
- In 0.8% of the injury crashes, a construction or repair was reported.
- In 1% of all fatal crashes, a construction or repair was reported.

Table F1: Crashes by Weather Conditions

WEATHER CONDITIONS	INJURY CRASHES	FATAL CRASHES	FATAL AND INJURY CRASHES	% FATAL
CLEAR	31,454	540	31,994	1.7%

TOTAL	45,335	729	46,064	1.6%

Weather conditions are not a distinguishing factor between injury and fatal crashes. The fact that most crashes occur when the weather is clear may be just a reflection of the number of days in the year which have clear weather conditions. However, there is an indication that fog leads to a higher percentage of fatal crashes relative to all crashes (injury and fatal) while rain leads to a lower than average percentage of fatal crashes.

Drivers
Summary

Three main elements affecting the number of crashes per year are driver, roadway, and vehicle type. Section G presents driver information and data and Sections F and H present roadway conditions and vehicle statistics respectively. No matter what the roadway condition, weather condition, or vehicle condition, the driver can greatly influence traffic safety by driving not only without impairment at the appropriate speed but also defensively. This means that we understand that other drivers will make errors and that we adjust our driving behavior appropriately.

The drivers may be divided into three different groups: youths (15-24), middle-aged drivers (25-54), and seniors (55 and above). The young drivers and the senior drivers stand out among all drivers with respect to crash rates. Young drivers represent the least experienced drivers and show an inclination for audacious driving behaviors. Due to the application of different laws and observed driving behaviors across the age range of 15-24, the youth group is subdivided into three age categories: 15-17, 18-20, and 21-24. The “beginners” age group, 15-17, has a high injury crash rate with few alcohol-related crashes. The age group 18-20 consistently has one of the highest fatal crash rates and one of the highest alcohol-related crash rates over the years.

We further divide the middle-aged drivers, 25-54, into 10-year age groups. This allows for a comparison to national statistics. The age group 25-34 represents a special concern due to high alcohol-related crash rates. Senior drivers (55 and above) experience driving difficulties related to deteriorating physical abilities and also are more likely to die in a crash than younger drivers.
This section presents the number of drivers involved in fatal and injury crashes by age and gender as well as the number of drivers killed or injured in crashes by age and gender. Due to missing information, such as gender or age of drivers, the tables may differ in the number of drivers. Note the difference between “fatal crash rate” and “fatality rate” of drivers. We base the fatal crash rate on all drivers in fatal crashes and the fatality rate only on the drivers killed.

AGE OF DRIVER

- In 2009 there were 1096 drivers in fatal crashes, 556 of whom were killed in the crash.
- The age group 18-20 had 5.1% of licensed drivers, but this age group made up 8% of drivers involved in fatal crashes.
- For comparison, the age group 35-44 represents 17.1% of licensed drivers in 2009 and 16.6% of drivers in fatal crashes.

DRIVER FATALITIES

- In 2009, 556 drivers died in fatal crashes.
- The fatality rate of drivers was 19 fatalities per 100,000 licensed drivers.
- In general, the fatality rates of drivers decline with age, but increased considerably for seniors.
- While only about 5.1% of licensed drivers are of ages 18 to 20, this age group accounted for 7.7% of all driver fatalities in 2009.

DRIVER’S GENDER IN FATAL CRASHES

- In 2009, the fatal crash rate of male drivers in the 18-20-year-old age group was several times higher than the fatal crash rate of female drivers of the same age group, i.e. 82 compared to 39.
- In 2009, on the average, 18 out of 100,000 licensed female drivers were involved in fatal crashes.
- In 2009, on the average, 57 out of 100,000 licensed male drivers were involved in fatal crashes.

AGE AND GENDER AMONG DRIVER FATALITIES

- Of the 556 driver fatalities in 2009, 441 were male and 115 were female.
- The fatality rate of male drivers is significantly higher than the fatality rate of female drivers. For instance, in 2009 the fatality rate of male drivers in the 18-20-year-old age group was 41 versus 18.
- While 79.3% of all driver fatalities were male in 2009, only 48.17% of all licensed drivers were male.

VIOLATIONS

- 66% of all drivers involved in fatal crashes had a violation.

Youths' involvement in fatal crashes is consistently much higher than expected every year. Table G2 also shows the number of drivers in fatal crashes per 100,000 licensed drivers. Figures G2a and G2b depict these crash rates for fatal and injury crashes.

Figure G2a: Fatal Crash Rate by Age

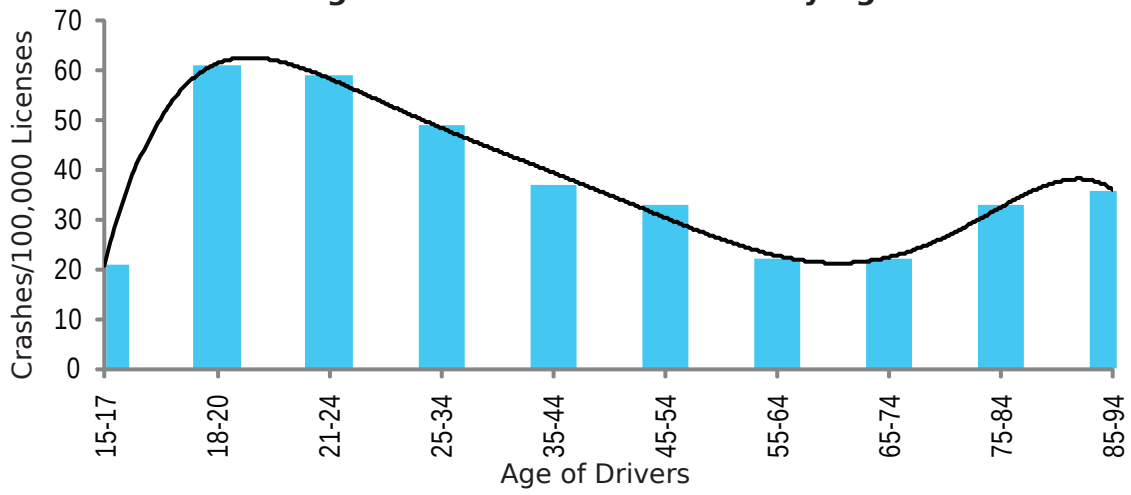

Figure G2b: Injury Crash Rate by Age

Table G3 shows the age distribution and the number of driver fatalities per 100,000 drivers. The fatality rate is highest for 18-20-year-old drivers. The fatality rates of drivers decline with age and increase for seniors. The higher fatality rates of senior drivers are due to the fact that a relatively higher percentage of senior drivers do not survive a crash.

Note: The "Female" and "Male" drivers are less than the "Total" drivers because of unreported gender in some crashes.

Table 4 shows the involvement in fatal crashes by gender. The fatal crash rates (crashes per 100,000 licensed drivers) of male drivers is significantly higher than the crash rates of female drivers. For instance, the fatal crash rate of male drivers in the 18-20 year old age group is almost three times as high as the fatal crash rate of female drivers of the same age group. The differences for injury crashes are smaller, although male driver crash rates are higher than female crash rates for all age groups.

Note: The "Female" and "Male" drivers are less than the "Total" drivers because of unknown gender in some crashes.

Figure G5a: Fatality Rate of Drivers by Age & Gender

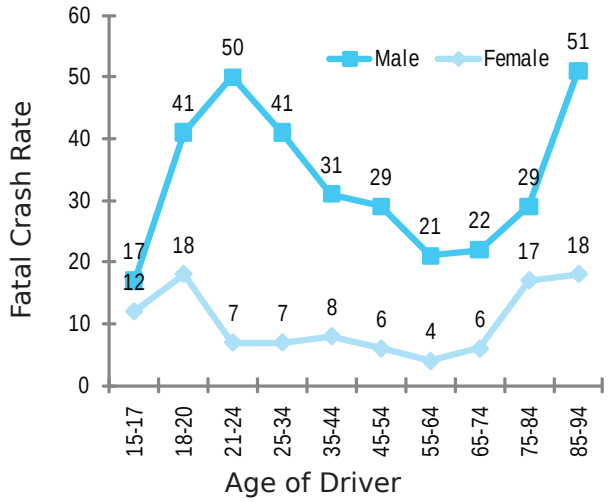

Table G5 indicates the fatality rates (fatalities per 100,000 licensed drivers) of drivers by gender and age. Figure G5a displays these fatality rates. These rates account for the differences in licensed drivers for each age group. However, the rate does not account for differences in vehicle miles traveled for different age groups. We can observe that the fatality rate of male drivers is significantly higher than the fatality rates of female drivers. For instance, the fatality rate of male drivers in the 18-20 year old age group is about three times as high as the fatality rate of female drivers of the same age group.

Vehicles
Summary

This section describes the vehicle type and the roadway type where crashes occur. The number of vehicles involved in crashes forms the basis of analysis. A crash may involve one or more vehicles. Note that the large truck involvement in crashes mentioned in this section includes all single unit trucks and trucks with trailers as indicated on the crash report. This number is larger than the number of truck crashes reported as a Commercial Motor Vehicle (CMV). The Federal government receives a report of the latter number of crashes.

Rural areas tend to have a higher percentage of vehicles involved in fatal crashes, while urban areas have a higher percentage of vehicles involved in injury and property damage crashes.

VEHICLES IN CRASHES

- In 2009, there were 1096 vehicles in fatal crashes, 85554 vehicles in injury crashes and 206629 vehicles in property-damage-only crashes. Thus on the average about 10% of all licensed drivers were in a crash in 2009.

TYPE OF CAR

- In 2009, 48.9% of the vehicles involved in injury crashes were passenger cars, while only 34.4% of the vehicles involved in fatal crashes were passenger cars.
- 22.1% of the vehicles in injury crashes were pick-up trucks, but 28.4% of the vehicles involved in fatal crashes were pick-up trucks.
- 2.5% of the vehicles in injury crashes were large trucks (single unit trucks and trucks with trailers) or busses, but 6.8% of the vehicles involved in fatal crashes were large trucks or busses.
- However, based on the percent of crashes rather than vehicles, 11% of fatal crashes involved single unit trucks, trucks with trailers or a bus in 2009 (see Table A13b).

INTERSTATES

- About 16.7% of all passenger cars involved in fatal crashes were in crashes on interstates in 2009.
- About 30.7% of large truck-involvement (single unit trucks and trucks with trailers) in fatal crashes occurred on interstates in 2009.

PARISHES

- On the average, 11% of the fatal crashes involved large trucks or busses in 2009.
- However, for some parishes, a very high percentage of fatal crashes involved large trucks.

OTHER VEHICLES TYPES

- There were 773 bicycles involved in crashes in 2009 with 12 fatalities.
- 1 child/children under the age of 12 was/were killed on bicycle(s) in 2009.
- 2166 motorcycles were involved in crashes in 2009 and 104 of the occupants of motorcycles were killed.
- In 2009, there were 38 injuries and 6 deaths reported involving a train.

State and Local Summary

Section I provides crash information by state and local routes. In 2009 state owned interstates/highways had:

- 84% of the vehicle miles traveled.
- 60% of all crashes.
- 80% of all fatal crashes.
- 65% of all injury crashes.

Trends
Summary

In Louisiana, driving under the influence of alcohol remains a top safety issue. Of particular concern is the involvement of drivers under the age of 21. Until 1995, the law did not address the illegal sale of alcohol to persons under age 21, but only the illegal purchase and possession of alcohol by persons under 21 years of age. In 1995, modifications of the law made it illegal to sell alcohol to persons under the age of 21. This 1995 modification also made it illegal to purchase and possess alcohol for persons less than 21 years of age. Although challenged, courts upheld the law. In 1997, legislation passed making it illegal for persons below 21 years of age to drive with a BAC of 0.02 or above (zero tolerance law). In 2004, a challenge of this 1997 legislation claimed that it capriciously discriminates against the youth (18-20-year-olds). The Louisiana Supreme Court ruled in May 2004 that the zero tolerance law is constitutional, thus upholding the 0.02 BAC law.

The analysis of fatal alcohol-related crashes in this section is based on an estimate obtained via a classification model developed at LSU. The model was tested for past years and shows very reliable results with a standard error less than 1%. The reported BAC results in the crash report may be either based on a breathalyzer test or on a blood-alcohol test. The crash report does not distinguish between the two types of tests. However, in many cases, the BAC test results are still pending. For this reason, the classification model is applied to generate missing BAC results to estimate the percent of alcohol-involved fatalities.

Drunk drivers are at least 13 times more likely to cause a fatal crash than sober drivers, according to a new study by Steven Levitt, Professor of Economics at the University of Chicago and Jack Porter, Professor of Economics at Harvard University.

- 402 traffic fatalities were estimated to be alcohol related in 2009.
- 362 of the 402 fatalities in alcohol-involved crashes (90%) had either alcohol themselves or were driving with a person who had alcohol.
- 40 of the fatalities in alcohol-involved crashes (10%) were killed by another driver who used alcohol.
- Alcohol is less often involved in rural-area crashes than in urban area crashes. In 2009, alcohol was involved in 48% of rural and in 50% of urban fatal crashes in Louisiana. Note that the alcohol-involved fatal crashes are estimated.
- Age is an important factor in alcohol-related crashes. There are several ways of presenting alcohol-related crashes by age. Note that the alcohol-related fatal crashes are estimated while the alcohol-related injury crashes include cases of known BAC levels and cases of pending BAC levels provided by the investigating officer indicating “alcohol involvement” on the crash report.
  1. The first method is to compare crash rates (crashes per 100,000 licensed drivers) in an age group. Even though it is illegal for youths under 21 to consume alcohol, the alcohol-related crash rate for 18 to 20-year-old drivers was about twice the average (19 versus 12 per 100,000 drivers) of drivers of all groups in 2009. The same is true for drivers killed in alcohol-related crashes (12 versus 9 per 100,000 drivers).
  2. A second method of understanding how alcohol-related crashes are affected by age is comparing what percentage of the total of alcohol-related involvement each age group has. While only 5.1% of the licensed drivers in 2009 were between 18 and 20 years old, 8% of the drivers in fatal crashes using alcohol were of age 18-20 and 7% of the drivers killed using alcohol were of ages 18-20.
  3. A third method is the percentage of alcohol use of drivers in each age group. This percentage is based on the number of crashes each age group is involved in. For instance, in the age group 18-20, 32% of drivers in fatal crashes of this age group used alcohol.

PEDESTRIANS AND ALCOHOL

- In 2009, 31 (28.4%) of the pedestrian fatalities had a positive BAC, i.e., 0.01 or above.
- However, 21.1% of the pedestrian fatalities’ BAC test results were pending at the time when this report was prepared.
- Also, 24.8% of pedestrians killed were not tested for alcohol in 2009.

WHEN ALCOHOL-RELATED CRASHES OCCUR

- Alcohol-related crashes occurred more frequently on weekends than during the week.
- The evening hours and early morning hours on weekends had the highest frequency of alcohol-involved crashes. Friday night and Saturday night involved the highest frequency of alcohol-related fatal and injury crashes.

Table J1: Drivers by Age in Crashes Using Alcohol

Age is an important factor in alcohol-related crashes. There are several ways of presenting alcohol-related crashes by age. Note that the alcohol-related fatal crashes are estimated while the alcohol-related injury crashes include cases of known BAC levels and cases of pending BAC levels provided the investigating officer indicated “alcohol involvement” on the crash report.

(1) The first method is to compare crash rates (crashes per 100,000 licensed drivers) between age groups. The crash rate accounts for different numbers of licensed drivers in each age group.

(2) A second method of understanding how alcohol-related crashes are affected by age is comparing what percentage of the total of alcohol-related involvement each age group has.

(3) The last Column in Table J1 shows the percentage of alcohol use of drivers in each age group. This percentage is based on the number of crashes each age group is involved in.

Figure J1a: Alcohol-Related Fatal Crash Rate by Age

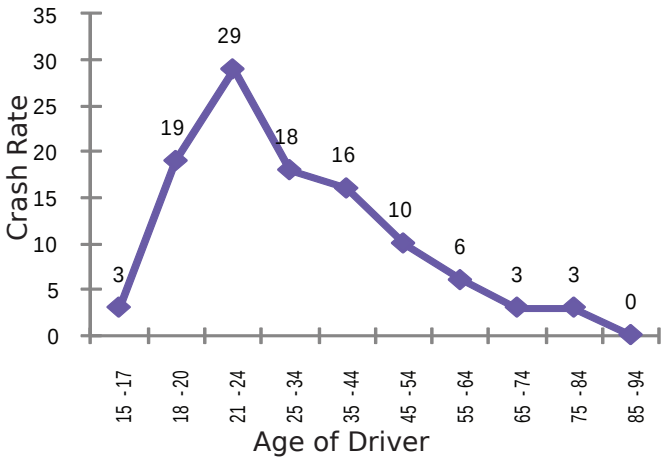

Figure J1b: Alcohol-Related Injury Crash Rate by Age

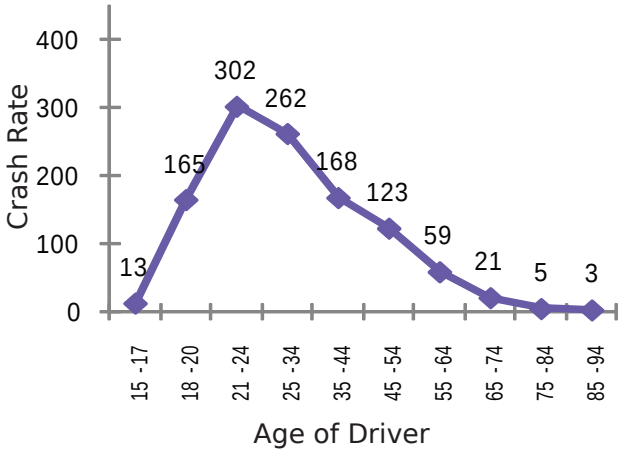

Table J2: BAC of Drivers in Fatal Crashes

BAC	ALL DRIVERS	DRIVERS KILLED
0	455	170
0.01 - 0.02	18	11
0.03 - 0.05	22	10
0.06 - 0.07	21	7
0.08 - 0.09	16	8
0.10	6	4
0.11 - 0.15	47	35
0.16 - 0.20	46	33
0.21 - 0.30	70	60
0.31 - 0.50	11	11
UNKNOWN	384	207
TOTAL	1,096	556

BAC	OBSERVED		ESTIMATED	
	SURVIVING DRIVERS	DRIVERS KILLED	SURVIVING DRIVERS	DRIVERS KILLED
0	53%	31%	79%	58%
0.01 - 0.09	8%	6%	11%	8%
> 0.09	7%	26%	10%	33%
UNKNOWN	33%	37%		

Table J3: Alcohol-Involved Fatalities by Vehicle Type

FATALITY OCCURS IN:	VEHICLES WITH FATALITIES	FATALITIES	VEHICLES WITH ALCOHOL INVOLVEMENT	FATALITIES IN VEHICLE WITH ALCOHOL	% ALCOHOL IN VEHICLE	% ALCOHOL FATALITIES IN VEHICLE
CARS	255	293	118	135	46.3%	46.1%
LIGHT TRUCKS	165	181	93	101	56.4%	55.8%
SUVS	68	76	26	30	38.2%	39.5%
MOTORCYCLES	101	104	42	43	41.6%	41.3%
BICYCLES	12	12	4	4	33.3%	33.3%
OTHER	41	49	13	14	31.7%	28.6%
PEDESTRIANS	107	109	36	35	33.6%	32.1%
TOTAL	749	824	332	362	44.3%	43.9%

Note that the sum of the crashes may be larger than the total since fatalities may have occurred in more than one vehicle type. Fatalities in vehicle using alcohol includes all fatalities in a vehicle where the driver was using alcohol. Thus the total of alcohol-involved fatalities includes all fatalities where the driver of the vehicle in which the fatality occured had alcohol. Pedestrian fatalities using alcohol includes all pedestrians who had been drinking and were killed.

Table J4: BAC for Pedestrians Killed

BLOOD ALCOHOL CONTENT	FREQUENCY	PERCENTAGE OF PEDESTRIANS
0	15	13.8%
0.01 - 0.09	7	6.4%
0.10 - 0.30	17	15.6%
0.31+	7	6.4%
NO TEST GIVEN	27	24.8%
TEST GIVEN, RESULTS PENDING	23	21.1%
UNKNOWN	13	12.0%
TOTAL	109	100.0%

Table J4 shows the BAC test results of pedestrians killed in crashes.

Figure J4a: Frequency of BAC in Fatal Pedestrian Crashes

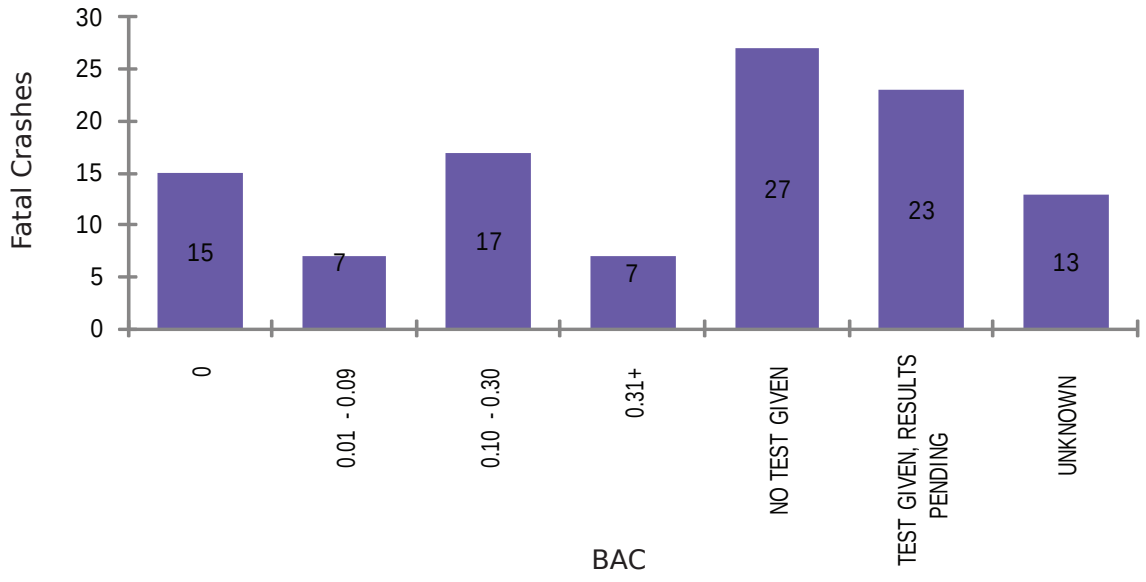

Table J5: Alcohol & Seatbelt Use of Driver Fatalities

Note: Table J8 does not include crashes with missing information

The evening hours and early morning hours on weekends have the highest frequency of alcohol-involved crashes. Figures J8a and J8b show that Friday nights and Saturday nights are the highest frequency of alcohol-involved fatal and injury crashes. Note that the alcohol-involved fatal crashes are estimated.

Figure J8a: Alcohol-Related Fatal Crashes by Time of Day & Day of Week

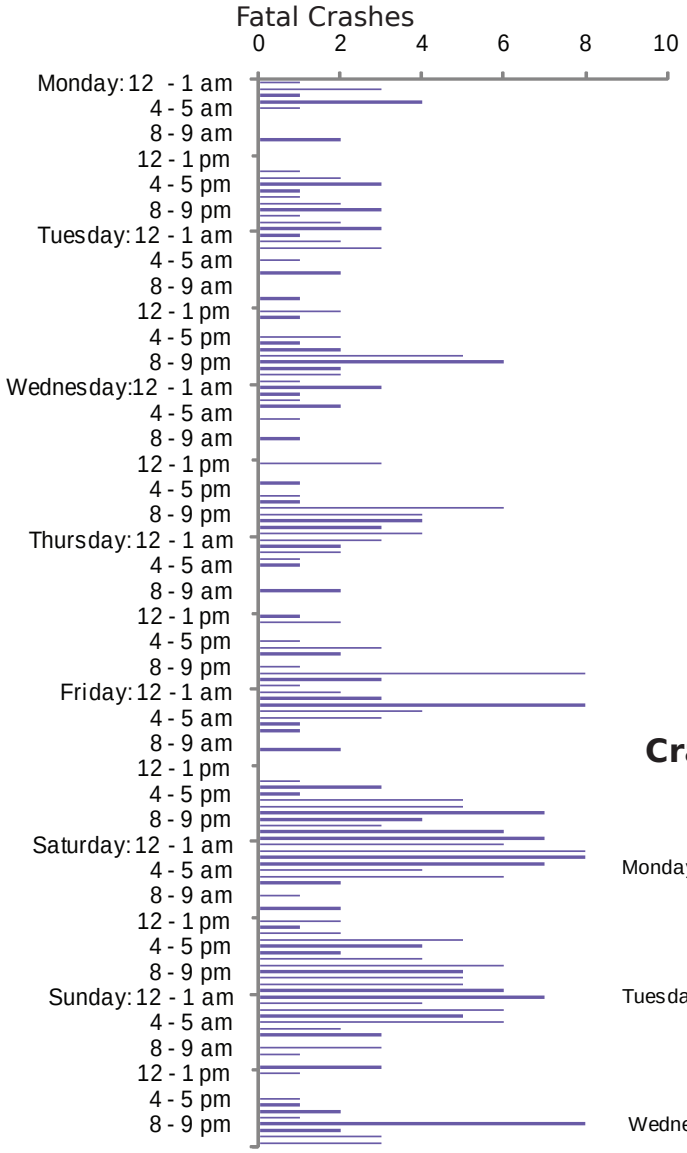

Figure J8b: Alcohol-Related Injury Crashes by Time of Day & Day of Week

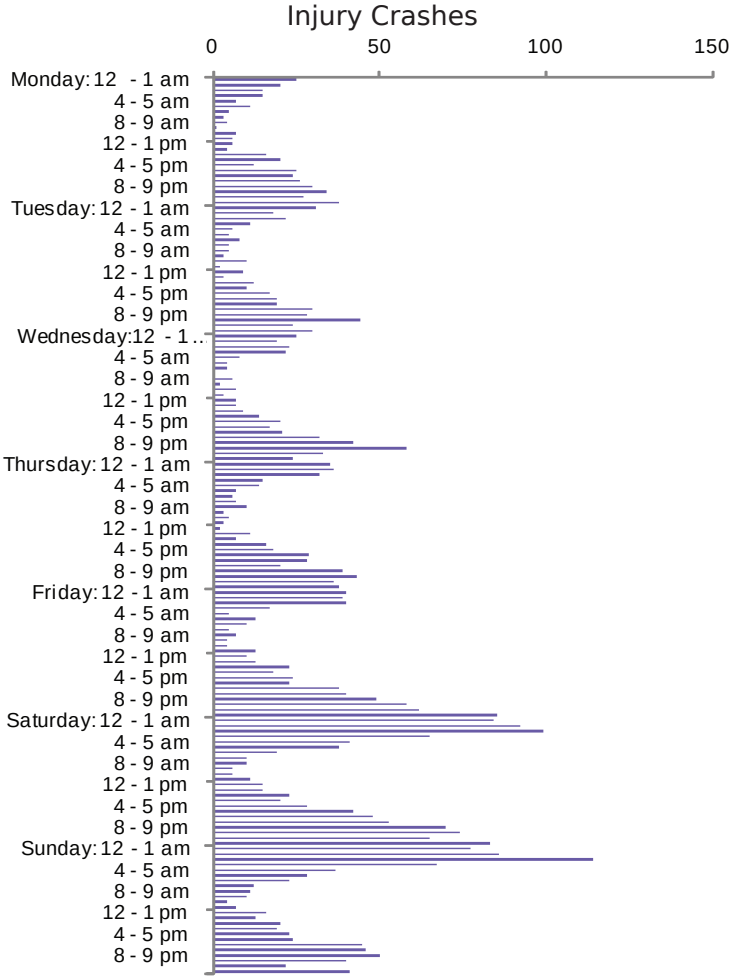

Table J9: Estimated Number of Crashes Involving Alcohol by Month

MONTH	CRASHES INVOLVING ALCOHOL	
	FATAL CRASHES	INJURY CRASHES
JANUARY	34	366
FEBRUARY	41	345
MARCH	25	379
APRIL	27	336
MAY	32	363

AUGUST	29	355
SEPTEMBER	25	305
OCTOBER	31	326
NOVEMBER	21	342
DECEMBER	21	328

Does not include crashes with missing information.

Figure J9a: Fatal Alcohol-Related Crashes by Month

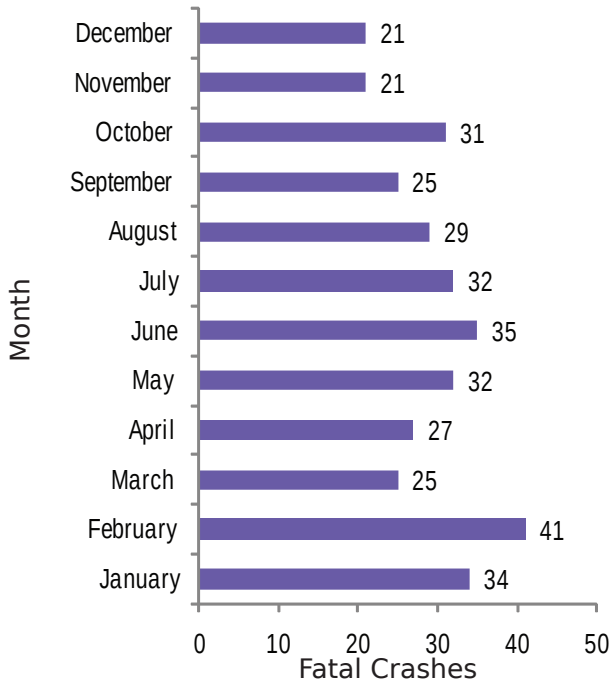

Figure J9b: Injury Alcohol-Related Crashes by Month

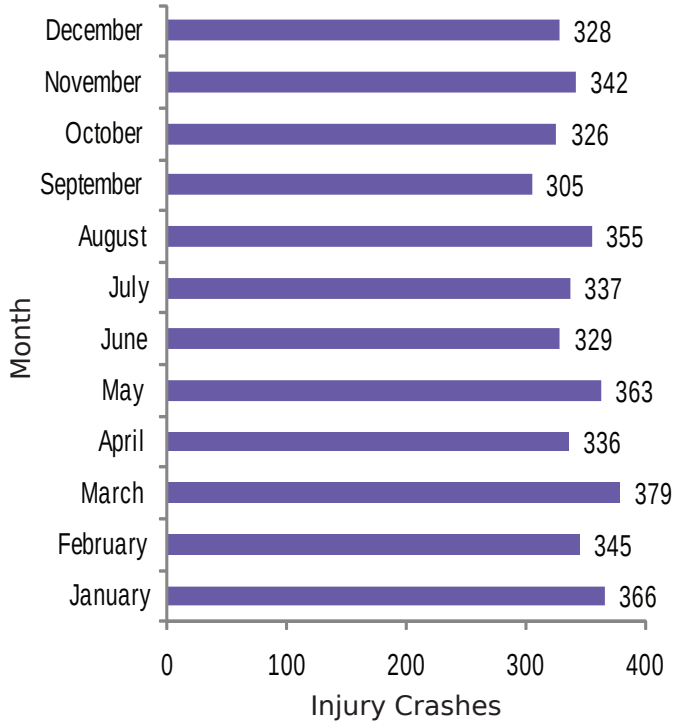

Table J9 depicts the estimated alcohol-related injury and fatal crashes. Alcohol-related crashes occur more frequently on weekends than during the week. Note that the alcohol-related fatal crashes are estimates and should not be compared to other tables reporting actual reported alcohol-related crashes.

Table J10: Estimated Alcohol-Related Crashes by Rural/Urban Areas

AREA	CRASHES INVOLVING ALCOHOL		PERCENTAGE OF CRASHES ALCOHOL RELATED	
	FATAL CRASHES	INJURY CRASHES	FATAL CRASHES	INJURY CRASHES
RURAL	250	2,421	48%	13%
URBAN	103	1,690	50%	6%
ALL	353	4,111	48%	9%

Does not include crashes with missing information.

Table J11 shows the estimated number of alcohol-related crashes by parish grouped by size of the parishes. The table also shows the estimated alcohol-related crashes and the reported alcohol-related injury crashes per 100,000 licensed drivers. A ranking within the groups is also provided. Smaller parishes tend to have a higher alcohol-related crash rate.

Seatbelt Use
Summary

This section deals with the use of safety belts and other safety devices. Louisiana's safety belt law requires drivers and front seat passengers to be buckled up when riding in a passenger car. NHTSA research "has found that lap/shoulder safety belts, when used correctly, reduce the risk of fatal injuries to front-seat passenger car occupants by 45 percent and the risk of moderate-to-critical injuries by 50 percent." For light truck occupants, safety belts reduce the risk of fatal injuries by 60 percent and of moderate-to-critical injuries by 65 percent. Research on the effectiveness of child safety seats finds these seats to reduce fatal injuries by 69 percent for infants (less than 1 year old) and 47 percent for toddlers between 1 and 4 years old (DOTD HS 808 768). Occupants in this section are all drivers and passengers.

- Not wearing a safety belt was one of the leading causes of being killed in a crash. Note that only drivers in vehicles with manufacturer-installed safety belts are included in the analysis. This excludes bicycles, motorcycles and off-the-road vehicles.
- In 2009, only 152 (35%) of the 435 drivers killed in motor vehicle crashes were known to be wearing safety belts.
- In 2009, 254 drivers killed in motor vehicles crashes were not wearing a safety belt. This is 63% of the known cases.
- 53% of the drivers killed did not wear a safety belt when the air bag deployed. Thus an airbag alone does not protect against being killed as much as wearing a safety belt.
- In 2009, only 33% of all drivers and passengers killed were known to have worn a safety belt.
- Only 5 of the 10 children killed, ages 4 and under, were known to be properly restrained in a child seat.
- Only 39 of the 145 killed passengers 27% ages 5 and older were known to be wearing a safety belt.
- Safety belt usage tends to increase with age.
- 20% of motorcycle drivers killed were not wearing helmets in 2009.
- 21.3% of the severely injured motorcycle drivers did not wear helmets in 2009.
- 64.4% of male driver fatalities were known to not have worn a seat belt.
- 40.4% of female driver fatalities were known to not have worn a seat belt.

Table K1: Safety Belt Use of Driver Fatalities by Parish

TOTAL	59%	36%	5%	100%

Wearing a seat belt and having airbags deployed will significantly reduce the odds of being killed in a crash which might have otherwise resulted in an injury only.

Pedestrians
Summary

Pedestrian fatalities in 2009 made up about 13% of all traffic fatalities.

- 3 children between the ages of 5 and below were killed as pedestrians.
- 10 children between the ages of 6 and 14 were killed as pedestrians.
- Males made up 72% of the pedestrians killed.
- 32.1% of the pedestrians killed had been drinking.

Youth
Summary

Of particular concern is the involvement of drivers in traffic crashes under the age of 21. These young drivers stand out among all drivers with respect to crash rates. They are the least experienced drivers and are also prone to audacious driving behavior. They have a much higher percentage of fatalities and injuries than expected by the makeup of the population and the licensed drivers. Young persons are more affected by alcohol than older people. In 1997, more 20-year-olds died in lower BAC (between 0.01 and 0.09) alcohol-related crashes than any other ages. For this reason, all states and the District of Columbia have set a BAC limit of 0.01 or lower for drivers under the age of 21 (Zero Tolerance Laws).

Until 1995, the Louisiana laws did not address the illegal sale of alcohol to persons under age 21, but only the illegal purchase and possession of alcohol by persons under 21 years of age. In 1995, the law was changed to make it illegal to sell alcohol to persons under the age of 21 as well as the purchase and possession of alcohol by persons under 21 years of age. Although challenged, the courts upheld the law. In 1997, a law was passed to make it illegal for persons below 21 years of age to drive with a BAC of 0.02 or above (zero tolerance law). In 2004 this law was challenged by claiming that it “capriciously” discriminates against youth, those 18-20 years of age. In May 2004, the Louisiana Supreme Court ruled that the zero tolerance law was constitutional, thus upholding the 0.02 BAC law. The following are highlights of the 2009 crash data report.

DRIVERS AGES 15-17

- Made up 2.5% of licensed drivers and 1.4% of drivers involved in fatal crashes and 2% of drivers killed.
- Made up 1.5% of drivers involved in injury crashes.

DRIVERS AGES 18-20

- Made up about 5.1% of licensed drivers, but were involved in 8% of fatal crashes and 8% of drivers killed.
- Made up 9.2% of drivers involved in injury crashes.
- The fatal crash rate (crashes per 100,000 licensed drivers) was nearly twice as high as the average crash rate of all drivers.

YOUTHS AND GENDER

- Female drivers ages 18-20 make up 2.5% of licensed drivers and make up 2.6% of drivers involved in fatal crashes.
- Male drivers ages 18-20 make up 2.5% of licensed drivers but make up 5.5% of drivers involved in fatal crashes.
- Female drivers ages 18-20 make up 33.5% of licensed drivers of ages 15-20 and make up 27.2% of drivers involved in fatal crashes from this age group.
- Male drivers ages 18-20 make up 33.8% of licensed drivers of ages 15-20 but make up 58.3% of drivers involved in fatal crashes from this age group.
- Male youth drivers were more likely to be involved in alcohol-related fatal crashes than female drivers.
- Female drivers ages 18-20 make up 17% of licensed drivers of ages 15-24 and make up 7% of drivers involved in alcohol-related fatal crashes from this age group.
- Male drivers ages 18-20 make up 17.2% of licensed drivers of ages 15-24 but make up 28% of drivers involved in alcohol-related fatal crashes from this age group.
- In the age group 15-24 male drivers made up 83% of drivers involved in alcohol-related fatal crashes.

Trends
Summary

Drivers may be divided into three different groups: youths, middle-aged drivers, and seniors (55 and above). The senior drivers stand out among all drivers with respect to crash rates. Senior drivers experience driving difficulties related to deteriorating physical abilities and also are more likely to die in a crash than younger drivers.

- Although the injury crash rate declines with age, the fatal crash rate of seniors is the highest of all drivers.
- 24 senior driver fatalities were recorded where the senior was under the influence of alcohol.
- Drivers older than 70 have the highest percentage of violations for Failure to Yield (19.1%), Careless Operation (11.5%) and Following Too Closely (5.2%).

APPENDIX GLOSSARY

These definitions are used in the traffic safety community and have been compiled from various NHTSA, LADOTD, and government publications, including ANSI D16.1996 and AAMVA ANSI D20-2003 technical manuals. They provide explanation to some of the terminology used throughout the book and CRASH reports.

ALCOHOL-INVOLVED CRASH (AIC):
Any CRASH in which a DRIVER or PEDESTRIAN had been drinking as indicated by the crash report.

ALCOHOL-RELATED:
NHTSA defines a crash as alcohol-related if either a driver or a non-motorist (usually a pedestrian) had a measurable or estimated blood alcohol concentration (BAC) of 0.01 grams per deciliter (g/dl) or above. Some states in the State Data System also report a crash as alcohol-related if the Police Accident Report (PAR) indicates evidence of alcohol being present, even though the crash participant may not have been tested for alcohol.

BAC:
Blood Alcohol Concentration. BAC is measured as a percentage by weight of alcohol in the blood (grams/deciliter). A positive BAC level (0.01 g/dl and higher) indicates that alcohol was consumed by the person tested.

BUS:
Large motor vehicles generally used to carry more than 10 passengers, including school buses, inter-city buses, and transit buses.

CATACLYSM:
An avalanche, cloudburst, cyclone, earthquake, flood, hurricane, landslide, lightning, tidal wave, tornado,
torrential rain, or volcanic eruption.

COLLISION TYPE:
The category which best describes the general type of collision which was the first event.

COMMERCIAL MOTOR VEHICLE (CMV) ACCIDENT:
The MCMIS Crash data includes crashes that are reported by states to the FMCSA through the SAFETYNET computer reporting system. The Crash File includes the National Governors' Association (NGA) recommended data elements collected on trucks and buses involved in crashes that meet the NGA recommended crash threshold. An NGA reportable crash must involve a truck (a vehicle designed, used, or maintained primarily for carrying property, with a gross vehicle weight rating or gross combination weight rating of more than 10,000 lbs.) or bus (a vehicle with seats for at least nine people, including the driver) or a vehicle carrying hazardous material. The crash must result in at least one fatality; one injury where the person injured is taken to a medical facility for immediate medical attention; or one vehicle having been towed from the scene as a result of disabling damage suffered in the crash. The Crash Profile Reports use the MCMIS Crash data as of March 2007.

CRASH:
An event which produces injury and/or property damage, involves a motor vehicle in transport, and occurs on a trafficway or while the vehicle is still in motion after running off the trafficway.

CRASH (TRAFFIC):
An unintended event that causes a death, injury or damage and involves a MOTOR VEHICLE on a TRAFFICWAY. (This book includes only traffic crashes which have resulted in a DEATH or INJURY to one or more persons. CRASHES which have caused only vehicle or property damage are not included.)

CRASH SEVERITY:
* Fatal Crash: A police-reported crash involving a motor vehicle in transport on a trafficway in which at least one person dies.
* Injury Crash: A police-reported crash involving a motor vehicle in transport on a trafficway in which no one died but at least one person was reported to have either an incapacitating injury, a visible but not incapacitating injury, or a possible injury with no visible evidence.
* Property-Damage-Only (PDO) Crash: A police-reported crash involving a motor vehicle in transport on a trafficway in which no one involved in the crash was killed or injured, but enough damage occurred to one or more vehicles to meet the state's minimum inclusion criteria.

DAY:
Time period from 0600 (6:00 A.M.) to 1759 (5:59 P.M.)

DEATHS (FATALITIES):
Those persons who have died within 30 days of a CRASH as a result of INJURIES sustained in that CRASH.

DRINKING IN A MOTOR VEHICLE--SEC. 13:1018.1 (EBRP):
It is unlawful...
* for any person to drink, consume, or be in possession of an alcoholic beverage while operating, or while riding as a passenger in, any private motor vehicle when such vehicle is upon a public road;
* for any operator or passenger of any motor vehicle to drink, consume, or be in possession of any bottle, container or receptacle containing alcoholic beverages which has been opened or the seal of a licensed manufacturer has been broken, or the contents of which have been exposed to the air, except when such bottle, receptacle, or container shall be kept in the trunk of the motor vehicle, or kept in some other area of the vehicle not normally occupied by the driver or passengers in the event that the motor vehicle is not equipped with a trunk. On a first conviction, punishable by fines up to $125 and imprisonment for 10 days to 6 months.

DRIVER:
A person who is in actual physical control of a VEHICLE or who was in control until control was lost. (A PEDALCYCLIST who is in control is considered a DRIVER.)

DRIVER AGE CATEGORIES:
Youths: 15-24
Middle-aged: 25-54
Seniors: 55 and above

DRIVER CONDITION:
The category which best describes the condition of a DRIVER at the time of the CRASH.

DWI:
Driving While Intoxicated (See OPERATING A VEHICLE WHILE INTOXICATED)

ELEVATED INTERSTATE CRASH:
Any traffic accident occurring on an interstate which is not level with the adjacent ground.

FARS:
Fatal Analysis Reporting System, a data system created by the United States Department of Transportion (DOT) and the National Highway Traffic Safety Administration (NHTSA) in 1975 to assist the traffic safety community in identifying traffic safety problems and evaluating both motor vehicle safety standards and highway safety initiatives.

FATAL ACCIDENTS:
Those CRASHES in which there was one or more DEATHS.

FATAL AND INJURY (F&I) CRASH:
The CRASHES in which there was an INJURY or a DEATH.

GROSS VEHICLE WEIGHT RATING (GVWR):
A gross vehicle weight rating is (1) a value specified by the manufacturer for a single-unit TRUCK, truck tractor or trailer, or (2) the sum of such values for the units which make up a TRUCK COMBINATION. In the absence of a gross vehicle weight rating, an estimate of the gross weight of a fully loaded unit may be substituted for such a rating.

IN TRANSPORT:
The term "IN TRANSPORT" denotes the state or condition of a transport vehicle which is in motion or within the portion of a transport way ordinarily used by similar transport vehicles. When applied to MOTOR VEHICLES, "in transport" means in motion or on a roadway.
Inclusions:
* MOTOR VEHICLE in traffic on a highway
* Driverless MOTOR VEHICLE in motion
* Motionless MOTOR VEHICLE abandoned on a roadway
* Disabled MOTOR VEHICLE on a roadway
* And others in roadway lanes used for travel during rush hours and parking during off-peak periods, a parked MOTOR VEHICLE is in transport during periods when parking is forbidden.

INJURY:
Bodily harm to a person as a result of a CRASH. INJURIES do not include DEATHS.

INJURY SEVERITY:
The police-reported injury severity of a person involved in a crash:
* Killed (Fatal)
* Injured (Incapacitating injury, evident injury but not incapacitating, and possible injury with no visible evidence)
* No Injury

INTERSECTION:
An area which contains a crossing or connection of two or more roadways not classified as driveway access, either along a roadway within an intersection proper or within 50 feet of an intersection.

INTERSECTION CRASHES:
Those crashes which occur at or within 100 feet of an intersection.

KILLED:
A DEATH as a result of a CRASH.

LARGE TRUCK:
Trucks with over 10,000 pounds Gross Vehicle Weight Rating (GVWR), including single unit trucks and truck tractors.

LIGHT TRUCKS:
MOTOR VEHICLES such as pickups, vans, blazers, and panel trucks.

LICENSED DRIVER:
A person who is licensed by a state to operate a MOTOR VEHICLE on public roadways.

LIGHT TRUCK:
Trucks with 10,000 pounds Gross Vehicle Weight Rating (GVWR) or less, including pickups, vans, and sport utility vehicles (SUV).

LOCATION TYPES:
Where the CRASH occurred (business, residential, etc.)

MISSING OBSERVATIONS:
A traffic record with some fields of the crash report not filled out.

MOTOR VEHICLES:
Any motorized (mechanically or electrically powered) VEHICLE not operated on rails.

MOTORCYCLE:
A two- or three-wheeled motor vehicle designed to transport one or two people, including motor scooters, mini bikes, and mopeds.

NIGHT:
Time period from 1800 (6:00 P.M.) to 0559 (5:59 A.M.)

NON-INTERSECTION:
An area along the roadway (including the shoulder) that does not contain a crossing or connection of two or more roadways, and is greater than 50 feet from an intersection.

OCCUPANT:
A person who is in or on a VEHICLE including the driver.

OPERATING A VEHICLE WHILE INTOXICATED--R.S. 14:98 (LA):
The crime of operating a vehicle while intoxicated is the operating of any motor vehicle, aircraft, watercraft, vessel, or other means of conveyance when the operator is under the influence of alcoholic beverages or the operator's BAC is 0.08% or more. On the first offense, punishable by a fine of $300 to $1,000, and 10 days to 6 months imprisonment (exceptions are in place). If the offender has a blood alcohol concentration of 0.20% or more, the violation is punishable with fines of $750 to $1,000 without benefit of parole, probation, or suspension of sentence, and suspension of driver's license for 2 years.

OTHER OBJECT:
An object in the roadway which is not part of the roadway (such as rocks, fallen trees, debris)

OVERTURN\ROLLOVER:
Any crash in which a vehicle rotates 90 degrees or more about any true longitudinal or lateral axis.

PAR:
Police Accident Report. A report completed by police officers at a motor vehicle traffic crash scene. It contains information describing characteristics of the crash, the vehicles, and people involved. The report also includes the results of the officer's investigation about the crash itself.

PASSENGER:
Any OCCUPANT of a VEHICLE other than its DRIVER.

PEDALCYCLE:
A non-motorized VEHICLE propelled by pedaling such as a bicycle, tricycle, unicycle, or pedal car. (The PEDALCYCLE is counted as a VEHICLE and the OCCUPANTS are counted as DRIVERS and PASSENGERS.)

PEDESTRIAN:
A person who is INJURED or killed in a CRASH and who was not in or on a VEHICLE.

PRETRIAL DIVERSION:
Includes all submits and refusals which did not lead to either a DWI conviction or an application of the 894 law.

PRIMARY CONTRIBUTING FACTOR:
The main cause of a CRASH.

PROPERTY-DAMAGE ONLY (PDO) ACCIDENT:
A noninjury accident.

RATE:
A rate is computed by dividing a total count by population statistics such as VMT, number of licensed drivers, or population.

REFUSAL:
When a law enforcement officer places a person under arrest for operating a motor vehicle while intoxicated and the person refuses to submit to an approved chemical test for intoxication.

RURAL:
All areas that are un-incorporated and incorporated areas with less than 2,500 population except for Jefferson Parish which is considered all URBAN.

SUBMIT:
When a law enforcement officer places a person under arrest for operating a motor vehicle while intoxicated and the person submits to an approved chemical test for intoxication and such test results show blood alcohol content over the legal limits.

TRAFFICWAY:
A land way open to the public as a matter of right or custom for moving persons or property from one place to another. This does not include land ways which are under construction or closed and which have been marked by signs or barriers.

TRANSPORT VEHICLE:
A TRANSPORT VEHICLE consists of one or more devices or animals and their load. Such devices or animals must include at least one of the following:

* A transport device, or a unit made up of connected transport devices, while idle or in use for moving persons or property from one place to another
* An animal or team of animals while in use for moving persons or property other than the animal or team itself from one place to another
* A movable device such as construction, farm, or industrial machinery outside the confines of a building and its premises while in use for moving persons, the device itself, or other property from one place to another.

If such a device or animal has a load, the load is part of that TRANSPORT VEHICLE. Loads include:

* Persons or property upon, or set in motion by, the device or animal
* Persons boarding or alighting from the device or animal
* Persons or property attached to and in position to move with the device

TRUCK COMBINATION:
A motor vehicle consisting of a TRUCK TRACTOR which has a trailer or semi-trailer attached.

TRUCK TRACTOR:
A motor vehicle consisting primarily of a single motorized device designed for drawing trailers or semi-trailers, but not for carrying other property on or in the device. When connected to a trailer or semi-trailer, such a device is considered a TRUCK COMBINATION.

UNIFORM TRUCK OR BUS (UTB) ACCIDENT:
See COMMERCIAL MOTOR VEHICLE (CMV) ACCIDENT.

URBAN:
Any incorporated area with more than 2,500 population and all of Jefferson Parish.

VEHICLE:
A device for carrying or transporting persons or things, i.e., cars, trucks, farm equipment, buses, motorcycles, pedalcycles, trains, and recreational vehicles.

VIOLATIONS:
The category which best describes the DRIVER'S infringement of MOTOR VEHICLE traffic laws.

VMT:
Vehicle Miles Traveled is an estimate of the miles traveled by all motor vehicles traveling on Louisiana roads. VMT is obtained by combining two estimates of (1) VMT of interstates and state roads and (2) VMT of local roads. The estimate of interstates and state roads are obtained from daily vehicle miles travel estimates. The daily vehicle miles traveled is obtained by dividing the state roads and interstates in control sections. Counters on these control sections count daily travel. These counts are then multiplied by the miles of the control sections.

Note: All population statistics show an increase. However, the VMT exhibit much more variation over time than expected from the variation in licensed drivers and population. Part of the variation may be due to estimation.

WEEKDAY:
Time period from 0600 (6:00 A.M.) Monday to 1759 (5:59 P.M.) Friday

WEEKEND:
Time period from 1800 (6:00 P.M.) Friday to 0559 (5:59 A.M.) Monday
